1 **PUBLIC HEARING**

2 **OAKLAND, CALIFORNIA**

3 **WEDNESDAY, AUGUST 23, 2006, 10:00 A.M.**

4 ---o0o---

5 DR. SEARCY: Why don't we go ahead and get
6 started. This is being recorded today, just to let
7 you know, and we also have a court reporter.

8 So, for the record, the regulations being
9 considered today are in Title 8 of the California Code
10 of Regulations, Sections 9792.20 through 9792.23.
11 It's the Medical Treatment Utilization Schedule
12 regulations that we're considering today.

13 These regulations have already been through the
14 advisory committee, the DWC Forum and through the
15 formal rule making process, which led us up to today's
16 hearing. So we'll be taking comments from all of you.

17 We're doing it a little differently, and I'll
18 explain that in a minute. We are also taking written
19 comments up until 5 o'clock today. So if you don't
20 speak but would like to submit something to us, you
21 can do that until five today. If needed, we will go
22 out for another comment period, which is a 15-day
23 comment period.

24 We have also posted a bulletin advising the
25 public of the rule making process on July_7th. A

1 second bulletin announcing a public hearing was issued
2 on August_9th, and the Division also posted notice of
3 the public hearing on the main page of its web site on
4 August 2nd.

5 We had heard some comments at our last hearing
6 that people were having trouble finding when our next
7 hearing was, so we've been trying to publicize it a
8 little more. If this wasn't sufficient, just let us
9 know because we take those comments to heart, and we
10 want to make sure that everyone knows about our
11 hearings.

12 So, my name is Anne Searcy. I'm the Medical
13 Director of the Division of Workers' Compensation.
14 Joining me is Destie Overpeck, the lead counsel for
15 the Division, and Minerva Krohn, the lead counsel on
16 these regulations. To my right is Stephanie Barrett,
17 who is the Deputy Labor Commissioner at DLSE. She
18 will be helping us conduct the hearing today.

19 Her role will be, as the moderator, will be to
20 keep testimony to the proposed regulations, keep
21 testimony to ten minutes so that everyone will have a
22 chance to speak, and to keep photographers in our
23 designated area. The last time we had some
24 photographers that were blocking other peoples' views,
25 and also their cords were considered to be a little

1 bit hazardous. We certainly don't want to have
2 anybody injure themselves by tripping over a cord at
3 our hearing. So we're trying to keep anybody with a
4 cord over in this area.

5 So I'm going to turn it over to Stephanie at this
6 point. You've all probably noticed that we have a
7 sign-in sheet over here. We're doing it a little
8 differently, so you don't have to put your name on two
9 sheets. You can sign in, and by doing that we will
10 send you notice if we do do another 15-day comment
11 period, so that's automatic if you sign your name
12 there. And if you would like to speak, just put a
13 check next to your name. If you decide -- We'll
14 obviously be bringing those sheets up here, so if you
15 decide halfway through that you want to speak and you
16 didn't put a check by your name, just go ahead and
17 sign up again so that we'll know.

18 Okay. I'll turn it over to Stephanie.

19 MS. BARRETT: Thank you. Thank you. Is this on?
20 Okay. What I'm going to do is I'm going to call the
21 names of people who have signed up, and when your name
22 is called, please come forward. If you have a
23 business card, it would be nice if you'd give it to
24 the court reporter. If you have a written statement,
25 you can give that to the court reporter as well.

1 The first name that I have is Mary Foto.

2 DR. SEARCY: And we're asking you to keep your
3 comments to the present regulations. If you have
4 other comments about subjects that are outside these
5 regulations, we would really like to hear them. And
6 you're welcome to call us or to write to us, and we
7 can give you the address, but we'd like to keep this
8 hearing to the present regulations.

9 MS. BARRETT: If I find that you're veering off
10 course, I will make a comment and ask you to get back
11 on course. And I'll let you know when your ten
12 minutes are up. And if you have comments that go
13 beyond the ten minutes, please consider writing them
14 down and submitting them prior to 5 o'clock. Thank
15 you.

16 MS. FOTO: Okay.

17 MS. BARRETT: Thank you.

18 **MARY FOTO**

19 MS. FOTO: Well, it's my pleasure to be in front
20 of this panel today and to address the Medical
21 Treatment Utilization Schedule. There are a couple of
22 things that I maybe should start with. I'm an
23 occupational therapist, and for the last 15 years have
24 had a practice that was primarily dealing with
25 orthopedic soft tissue injury, work injury related

1 type things.

2 I am representing the American Occupational
3 Therapy Association today, and that's an association
4 of over 35,000 members, and we have 3,300 of them that
5 practice here in the State of California, and many of
6 them do work extensively with injured workers.

7 Occupational therapists use work-related
8 activities in the assessment and treatment and
9 management of individuals whose ability to work has
10 been impaired by either physical and/or emotional
11 illness or injury.

12 The testimony that we just wanted to quickly
13 bring to your attention is in two areas, and that is,
14 and Dr._Searcy, I'm going to ask you for some prompts
15 here, since I've gone first and I'm not sure -- May I
16 just reference the section, I don't need to --

17 DR. SEARCY: Oh, that's fine.

18 MS. FOTO: Thank you. Okay. The first of the
19 two sections that we'd like to reference is 9792.21.
20 And I would like to say first that the American
21 Occupational Therapy Association applauds DWC for
22 including the provision which states that treatment
23 shall not be denied on the sole basis that a condition
24 or injury is not addressed by the ACOEM Practice
25 Guidelines. We are concerned about how the above

1 provision is going to be interpreted and implemented
2 into actual practice. Will providers need to include
3 that evidence that you speak of with every bill, every
4 claim that's sent in? I mean is there going to be a
5 way that this can be efficient and expedited in some
6 way?

7 The second concern is will the claims
8 administrator be empowered to determine if the
9 treatment provided is in accordance with other
10 scientific evidence-based medical treatment guidelines
11 that are generally recognized by the national medical
12 community? How is that actually going to occur? I
13 mean how do you envision the process to occur? What
14 if there is a disagreement, as there is today, between
15 those claims administrators and providers of service?
16 And that would be all providers of service. Who is
17 then going to make a judgment call? How is that going
18 to be handled?

19 The second issue we'd like to raise is, I will
20 say truthfully in a sense it's going to sound
21 self-serving, and perhaps it is, but it's in regard to
22 the Medical Evidence Evaluation Advisory
23 Committee, and it -- in Section 9792.23 you do point
24 out that it might be either an occupational or a
25 physical therapist. And, just for the record, I would

1 like to state that occupational therapy is in fact a
2 unique and separate profession from physical therapy,
3 and we are not interchangeable. And I think they
4 would say the same thing as well.

5 AOTA respectfully requests that the committee be
6 expanded, and I know many people will be addressing
7 that probably to you today in various areas, but the
8 committee be expanded to include an occupational
9 therapist with a specialty in work injury. The unique
10 contribution that I feel that we bring to this whole
11 area is the fact that with industrial injuries we work
12 in a very integrated way. From the time we first see
13 someone we're looking for red flags, whether they're
14 emotional or physical, that might make something that
15 looks like a straightforward injury less than
16 straightforward. And occupational therapists really
17 do like redesign and, therefore, job being part of
18 life, life skills. I think that the focus that we
19 would bring to the committee would be a very holistic
20 one in that way, and that's why I propose this.

21 Occupational therapists do work with all
22 dimensions, as I said. That would be the physical,
23 the cognitive, sensory, motor and psychosocial,
24 whereas physical therapists have a different focus,
25 generally, that's usually on the physical and

1 functional limitations that are related to
2 musculoskeletal, neurological, cardiopulmonary and
3 tegumentary malfunctions.

4 That was it. Thank you very much.

5 MS. BARRETT: Thank you very much.

6 All right. The next person, forgive me if I've
7 misspelled, mis-say this. It's Tee Fang Chu? I don't
8 know quite -- is there a -- No?

9 DR. SEARCY: From Woodland Hills?

10 MR. CHEN: My name is Ta Fang Chen.

11 DR. SEARCY: Why don't you come forward then.
12 Can you come forward, please?

13 MS. BARRETT: Would you mind stating your name,
14 first thing. And, for future reference, could you
15 please come forward and state your full name.

16 DR. SEARCY: And spell it also for the court
17 reporter. It helps them.

18 **TA FANG CHEN**

19 MR. CHEN: All right. My name is Ta Fang Chen.
20 T-a, F-a-n-g, C-h-e-n. I'm from California
21 Acupuncture Medical Association.

22 Yesterday I faxed a letter into the, to the
23 medical unit. Basically our point is -- I read the
24 Statement of Reason. Point out, at page 35 point out
25 that relates the hand, the department, they list the

1 ACOEM reference, but ACOEM didn't list any new
2 reference to support clinical control studies. Our,
3 C-A-O-M-A, CAOMA, ACOEM Guideline, we list clinical
4 control study. So our guideline have evidence based,
5 have the results. So ACOEM, ACOEM, A-C-O-E-M, the
6 guideline does not have evidence based, so this is
7 problem here. So we want the medical unit to resolve
8 this issue, because we don't want you -- I mean you
9 say, you say you use ACOEM Guideline, but that is not
10 correct information.

11 And we also have this commission, from the
12 Commission of Health and Safety and Workers'
13 Compensation Commission, they suggest that include
14 ACOEM Guideline in California medical treatment
15 utilizing schedule. So we still want just Medical
16 Director include acupuncture guideline in the whole
17 thing. Thank you.

18 MS. BARRETT: Thank you very much.

19 Would Robert Thayer or Thouyer please come
20 forward. Please be sure to say your name and spell it
21 for the court reporter.

22 MR. THAUER: Yes. It's actually Thauer.

23 MS. BARRETT: Thauer. Sorry.

24 **ROBERT R. THAUER**

25 MR. THAUER: Good morning. I've submitted some

1 written comments, but I do have a couple of things I'd
2 like to say at this hearing, and I do appreciate the
3 opportunity to comment on the Medical Treatment
4 Utilization Schedule.

5 I represent a nonprofit group called the Alliance
6 for Physical Therapy, Rehabilitation and Medical
7 Technology. The members in the endorsing
8 organizations of this alliance are primarily
9 manufacturers and providers of physical therapy,
10 physical therapy devices, home medical equipment and
11 orthotics.

12 My first comment is on 9792.22, which we believe
13 an additional level of evidence should be included in
14 the hierarchy of scientific-based evidence. I've
15 already provided Ms. Gray with a copy of the Code of
16 Federal Regulations regarding food and drugs, medical
17 devices and the determination of the safety and
18 effectiveness of medical devices by the Food and Drug
19 Administration. And under Section 860.7, the U.S.
20 Food and Drug Administration Center for Devices and
21 Radiological Health reviews devices for safety and
22 efficacy. It should be noted that the reviewers are
23 scientists with the appropriate scientific credentials
24 to make determinations regarding the devices submitted
25 to the various panels for FDA approval. FDA protocol

1 clearly demonstrates that the federal government
2 evaluates the scientific evidence to make a
3 determination of safety and efficacy for the benefit
4 to health from the use of the device for its intended
5 use and conditions of use. We would hold that the
6 U.S. federal government approval to market a medical
7 device as safe and effective provides prima facie
8 evidence that the device is appropriate when
9 prescribed for the indications for use. FDA approval
10 for medical devices clearly meets the standard in
11 SB228 as nationally recognized scientifically based
12 medical evidence and, therefore, should be highly
13 ranked in the hierarchy of evidence described in
14 9792.22.

15 Secondly -- That's my most important point, by
16 the way, since most of our members are medical device
17 manufacturers. Secondly, we believe that the
18 definitions quoted in 9792.20 focus more on an
19 academic approach to the practice of medicine.
20 Qualifying evidence only derived from articles
21 published in peer-reviewed journals dismisses medical
22 texts, medical school training, developing
23 technologies and procedures, unpublished studies and
24 findings, and effectively negates community standards
25 of care if they are not based or cannot be proven to

1 be based on an analysis of peer-reviewed literature.
2 Physicians practice medicine. Not all medical
3 practice is grounded in use of guidelines. And, even
4 so, guidelines in medical literature are often
5 conflicting. Payers in group health and Medicare pay
6 benefits for many practices and community standards of
7 care that would be effectively denied under this
8 restrictive hierarchy of evidence.

9 If ACOEM Guidelines, which by its own admission,
10 were or are often consensus based and they're to be
11 given presumption, then other consensus based or
12 non-scientific evidence, e.g., or, for example,
13 standard of care in the community, expert opinion,
14 payer approval for treatment, should have credence in
15 the hierarchy of evidence.

16 I would like to also -- I would add the alliance
17 was represented at the RAND stakeholder meeting, and
18 one of the things that was pointed out by Dr._Scott at
19 that meeting was some of the restrictions she was
20 under in evaluating treatment guidelines. Her
21 mandate, I believe, was to look for comprehensive sets
22 of treatment guidelines, as opposed to individual
23 guidelines from medical specialty societies. And I
24 believe, at least I hope, going forward, that the
25 panel that's being developed will have the opportunity

1 to not be restricted into only looking at
2 comprehensive sets of guidelines. For example, the
3 California Orthopedic Association and Dr._Scott of
4 RAND both felt that the North American Spine Society,
5 NASS's guidelines on the lower back were very good,
6 but they were not able to be considered because,
7 obviously, the society only focuses on one major body
8 part.

9 Additionally, I believe there was a mandate, and,
10 again, I hope this is not perpetuated, that guidelines
11 be updated every three years. I believe that's an
12 unrealistic time frame in that clinical studies and
13 the development of new procedures and technologies
14 often take five to ten years. And, you know, medical
15 societies have a lot of things on their plate and to
16 continually have to go back and update their
17 guidelines is rather restrictive. And I believe
18 that's the reason that the academy, the American
19 Academy of Orthopedic Surgeons, at least it was
20 partially a reason why they withdrew their guidelines
21 from consideration, even though RAND had initially
22 suggested that they be utilized.

23 Last, but not least, and I did skip some of the
24 things that I had sent to Ms. Gray, is the lady that
25 first spoke mentioned about the concern in 9792.21

1 about -- I applaud also the acknowledgment that if
2 it's not in ACOEM, you can't use that as a basis of
3 denial. But one of the things we're seeing, and I
4 would like to see addressed, is that some payers are
5 applying an ACOEM comment or treatment indication for
6 one body part to another body part where that
7 particular treatment is not mentioned, and I think
8 that's inappropriate that they're generalizing that if
9 there's a comment about a modality or a treatment
10 relative to, say, the knee, they're putting it on the
11 shoulder, the back, the hand, et cetera. So I'd ask
12 that the Division address that.

13 So I thank you very much.

14 MS. BARRETT: Thanks. I'll say the last name
15 first, it's Wong, and I think it might be either Tim
16 or Lung Wong.

17 Please say your name as you -- Please. Please
18 state your name. I'm not sure I got it correct.

19 **LUN WONG**

20 MR. WONG: My name's Lun Wong, L-u-n, W-o-n-g.

21 MS. BARRETT: Okay. Thank you.

22 MR. WONG: My English not very well. Can I use
23 my friend to interpreter for me?

24 MS. BARRETT: Yes.

25 MR. WONG: Please.

1 UNIDENTIFIED INTERPRETER: I am going to
2 translating for him.

3 DR. SEARCY: Thank you.

4 INTERPRETER: He was injured doing the work on
5 April 4th of 2001.

6 First, there was no disagreement that the company
7 that he worked for already agree that he was
8 work-related injury, and the insurance company still
9 has to send him to the doctor they appointed to, but
10 not his choice.

11 DR. SEARCY: We can bring a chair over to him.
12 Would that be helpful?

13 UNIDENTIFIED SPEAKER: This is sick. What do
14 workers have to go through to get help here?

15 INTERPRETER: But the doctor that appointed by
16 the insurance company won't treat him when he went
17 there. The reason is when he was injured he was
18 driving his own car. But the company he work for,
19 they don't have company's car and company already said
20 that's work related.

21 He went to see his doctor, spend about six
22 thousand something dollars, and the insurance company
23 won't reimburse it.

24 Five years later now the insurance company said
25 he still owe the insurance company eight thousand

1 seven hundred something medical expense.

2 There is a CIGA plan they want him to join. He
3 wants to know if he join, after he join the CIGA plan,
4 will the insurance company won't ask him for eight
5 thousand something dollars.

6 He know the answer is no. And the insurance
7 company only want to use it as an excuse that he won't
8 get a life-long treatment for his condition.

9 MS. BARRETT: Okay. Sir, the hearing today is to
10 discuss the regulations that have been enumerated.
11 Your concerns are very important and --

12 UNIDENTIFIED SPEAKER: It's disgusting, though.

13 MS. BARRETT: Yeah. And, actually, what you can
14 do is you can contact the Information and Assistance
15 Unit, and they have the answers for you there.

16 UNIDENTIFIED SPEAKER: He's giving testimony now.

17 DR. SEARCY: That's okay, sir. We're just trying
18 to let him know that he can continue testifying.
19 We're not trying to break into it. But it seemed like
20 they were asking a question where they could go, and
21 we were just trying to answer his questions.

22 MS. BARRETT: Yes.

23 DR. SEARCY: So there are Information and
24 Assistance officers available around the state, and we
25 can give you that information afterwards.

1 UNIDENTIFIED SPEAKER: He said he went there. He
2 tried to get advice.

3 DR. SEARCY: Why you don't you let him tell us.

4 UNIDENTIFIED SPEAKER: Well, you stopped him.

5 MS. BARRETT: Have you signed up to talk?

6 UNIDENTIFIED SPEAKER: Yes, I've signed up.

7 MS. BARRETT: Okay. Very good.

8 INTERPRETER: Yeah. He does appreciate your
9 information about the assistance information.

10 He know the lawyers will, might be able to deal
11 with this case, but he already, he's totally
12 disappointed about the law system of United States.
13 His impression is the lawyers are all legal robbers.
14 The court already make the decision. He doesn't know
15 what the rest of his life will be.

16 MS. BARRETT: All right. I'm not sure what he
17 said, but it sounds very emotional.

18 INTERPRETER: Yeah, he just wants to get help from
19 the society.

20 MS. BARRETT: Thank you very much for testifying.
21 I'm sorry about your pain, but is there anything else
22 that -- is there anything you would like to discuss
23 concerning the regulations presently before us?

24 UNIDENTIFIED SPEAKER: That's obvious, the
25 regulations are broken down.

1 INTERPRETER: He has prepared his speech, but now
2 he's all confused by the pain.

3 MS. BARRETT: Well, if you have anything in
4 writing that you would like to submit, we'd definitely
5 accept it. I'm going to have to call the next speaker
6 at this time.

7 INTERPRETER: He wants to know for the -- like to
8 repay for his injury is it according to the W-2 form
9 or according to his own salary?

10 DR. SEARCY: That goes outside of my expertise
11 for sure and really the purpose of this today. So, we
12 can give you -- Susan I think is here somewhere. We
13 can give you the number of the I and A officers who
14 would be very helpful for him. They're spread
15 throughout the state, and they can sit down and talk
16 to him on the phone or in person and give him the kind
17 of advice that he might need. So --

18 MS. BARRETT: Again, thank you very much for
19 coming in.

20 I'm going to have to -- I'm going to have to call
21 the next speaker at this time. We appreciate you
22 coming in.

23 DR. SEARCY: Yes. Thank you very much.

24 MR. WONG: Thank you for everybody's support.
25 Thank you.

1 MS. BARRETT: Okay. Thank you. Todd McFarren.
2 If you wouldn't mind saying your name, I would
3 appreciate it. Thank you.

4 **TODD McFARREN**

5 MR. McFARREN: Todd McFarren, M-c-F-a-r-r-e-n.
6 And I'm here today representing the California
7 Applicants' Attorneys Association. We certainly
8 appreciate the opportunity to address the proposed
9 regulations on Medical Treatment Utilization Schedule
10 re-adopting the ACOEM Guidelines as presumptively
11 correct for acute as well as chronic conditions. As
12 many people realize, medical treatment guidelines
13 properly understood should ensure that injured workers
14 receive the care that they need to cure and relieve
15 from the effects of their injuries. It should not be
16 conceived as a cost-saving device. Cost savings will
17 result from correct care delivered in a timely manner.
18 But cost savings as a result of arbitrary rules
19 terminating medical treatment simply externalizes the
20 costs to private health care coverage, to government,
21 and most of all to the injured worker himself or
22 herself and their family. The legislation -- the
23 Legislature adopted ACOEM only as an interim step,
24 sight unseen, prior to publication. The RAND study
25 commissioned by the Health and Safety Commission

1 concluded that California would be better off starting
2 from scratch, or RAND suggested that the state patch
3 multiple guidelines together into a coherent set.
4 ACOEM was conceived only for acute conditions, not
5 chronic ones. Sure it may apply to some chronic
6 conditions but not by design, just by chance. ACOEM
7 frankly enjoys no scientific validity, even with
8 respect to acute conditions. It is, as it says, a
9 guideline. It's guides. It's an attempt to orient
10 the treating doctor. It's more like a compass than
11 map quest. It allows doctors to apply their clinical
12 judgement against the backdrop of the guideline. It's
13 not designed as some inflexible administrative rule
14 that should be given presumption. By applying ACOEM
15 to chronic conditions when the guide itself states it
16 is for acute conditions only gives rise to a sort of
17 Alice in Wonderland kind of a feeling. I fear the
18 contraction could explode some of our judges' heads if
19 we're not careful. We ask that you reject mechanical
20 medicine and Kafkaesque proposals. There is a
21 pragmatic way to proceed that protects the carrier's
22 concern to pay for only necessary treatment and the
23 injured worker's right to receive the care he or she
24 needs.

25 In July of '05 Illinois rejected any one

1 particular set of medical treatment guidelines
2 including ACOEM and referred instead to, and I quote,
3 "Standards of care or nationally recognized
4 peer-review guidelines as well as nationally
5 recognized evidence-based standards." Conflicts could
6 be resolved by the hierarchy of medical evidence.
7 This way doctors must still comply with guidelines,
8 peer-review and evidence based, but have the
9 flexibility to treat the patient as an individual.

10 Let me just make a few other points if I may with
11 respect to 9792.21 and 9792.8 which addresses the idea
12 that treatment shall not be denied based solely on,
13 and then it uses in one section condition or injury
14 and then in another section treatment. This should be
15 harmonized it seems to me. That we should be talking
16 about treatment not about conditions and injuries.
17 They're very quite different concepts.

18 On that note, I thank you for the opportunity to
19 speak.

20 MS. BARRETT: Thank you very much. Okay. Would
21 England please come up. I'm sorry. There was only a
22 last name or a first name. If you have a written
23 statement you're welcome to --

24 WILLIAM ENGLAND

25 MR. ENGLAND: No.

1 MS. BARRETT: And if you wouldn't mind saying and
2 spelling your name.

3 MR. ENGLAND: My name is William England, and I
4 don't know which section of ACOEM I'm doing because
5 all of my denials just say ACOEM. They don't say
6 which section I'm being denied under. I have here one
7 denial where it says diagnosis unknown. Yet CorVel
8 has been paying for the services required. The doctor
9 wants to do a re-evaluation of my throat, but this
10 doctor says well I don't know what's wrong with him
11 because CorVel doesn't, obviously doesn't send all of
12 the information to him. It says surgery unknown. Yet
13 they paid for 54 days of my being in the hospital, but
14 they say they don't know about it. I'm being denied
15 over here for an EMG when CorVel authorized it,
16 myelogram and a CAT scan. The doctor wanted all three
17 because the myelogram and the CAT scan by itself is
18 useless without the EMG, but they deny it. Why?
19 Because of ACOEM. And another section over there and
20 a third section. But nothing -- never do they specify
21 chapter and verse. A good number of my denials come
22 back from CorVel without anybody saying who denied it.
23 Just denied. They don't send the information. I
24 can't come up here and say I don't approve of this
25 section here because I don't know which section I'm

1 being denied on. I'm just being denied on this whole
2 blanket thing. That man was just speaking about
3 chronic illnesses. I have several injuries. Every
4 one of them has been denied initially until the
5 attorneys have taken it to court. This was before
6 this ACOEM thing. Now with ACOEM they're denying
7 everything. They've denied therapy that three doctors
8 have recommended. A doctor who's never seen me, has
9 no idea who I am or what I am, and I have no idea what
10 information he's denying me on, denies. And yet
11 there's no recourse except to bring the attorneys to
12 take it to court. Now granted this thing was set up
13 for the protection of the insurance company, but
14 shouldn't some consideration be given to the worker.
15 Everything that I have is work related. Everything's
16 been documented by x-rays, by other diagnostic tools,
17 by 54 days in the hospital. I went in for a cervical
18 operation. I was supposed to be out in three days. I
19 had an allergic reaction that caused a swelling in my
20 throat which still hasn't been cured. I've lost
21 almost complete use of my right arm. These things are
22 ongoing. The doctor wants to fix them, but it keeps
23 being denied. Everything is denied. When I first
24 went in, my hearing aids were denied even though they
25 had the recommendation until it went to court. How

1 can we as a worker address your particular sections of
2 ACOEM when we never know what section we're being
3 denied under. We don't have a clue as to what it is
4 other than denied because of guidelines. And your
5 guidelines aren't written in stone because they're
6 guidelines, and yet you want to turn around and make
7 these things permanent. Isn't there any compassion
8 for the injured worker or is it all dollars and cents
9 for the insurance company? I know that's a rhetorical
10 question that you're not in a position to answer, but
11 how can I address whether or not I approve of you
12 putting in these sections if I don't know what they
13 are? You don't tell us. The insurance companies
14 never tell us. CorVel never tells us. Gallagher
15 Bassett. Everything that the doctor orders, Gallagher
16 Bassett says review it. As soon as CorVel reviews it,
17 they reject it.

18 That pretty much summarizes the whole thing. I
19 mean I can go on to four operations on this shoulder,
20 one operation on this one. Carpal tunnel on both
21 arms. Two cervical spine operations from which I'm
22 still trying to recover, and yet everything all along
23 has been denied. I don't know what else to say other
24 than, if you want us to have a voice in these section
25 whatever and whatever, publish the section whatever

1 and whatever and put it out to the people so that the
2 people in turn, who in theory are supposed to be
3 running this country, have a chance to say something
4 about it. Thank you for your time.

5 MS. BARRETT: Thank you very much for the
6 testimony.

7 DR. SEARCY: Thank you for your testimony. I'd
8 just like to point out for you, sir, so that you'll
9 know that ACOEM, we made sure because we do want ACOEM
10 to be available to people. So, it is in every I and A
11 office and available for public to look at. So, you
12 can go into any I and A office and look at a copy
13 there. It's also available in most medical schools,
14 which I'm not sure where you live, but between the two
15 of them hopefully you can find it.

16 The other thing is that, when they deny in our
17 utilization review regulations, when a group denies
18 it, they're not supposed to just state that it was in
19 ACOEM, but they should give you, the insurance company
20 or the U.R. organization is supposed to give you what
21 part of that is being used to deny it because we
22 understand that you don't have it necessarily at your
23 home. So, they're actually supposed to copy that
24 portion of it and send it to you and, if that's not
25 happening, you should go ahead and contact our

1 office.

2 MR. ENGLAND: It's not happening with CorVel. I
3 must have 50 rejections from CorVel, none of which has
4 ever described chapter and verse. Most of which are
5 never signed. Most of which don't even refer to what
6 doctor. It is just a blanket denial with whatever
7 reason is denied.

8 DR. SEARCY: Well, let me say again, why don't
9 you go ahead and send some of that into us and we'll
10 take a look at it. It's actually a slightly different
11 subject in that that's our utilization review sanction
12 guidelines, but go ahead. I mean I think it's very
13 important for you to understand that you can send that
14 into the Medical Unit in this building, and we'll take
15 a look at it. We're not the ones who solve your
16 problems you've already -- as far as that goes through
17 the judicial system, but if a company isn't following
18 the rules, we'll contact them and remind them of the
19 rules and take it from there, and that's also what our
20 sanction guidelines are for, in our sanction
21 regulations. So, please send it into us.

22 MR. ENGLAND: Where would I get that address?

23 MS. BARRETT: I can give that to you. It's -- do
24 you have -- wait one second. I'm sorry, ma'am. I'm
25 going to call out the next name. I'm not sure if

1 yours is actually the next name.

2 UNIDENTIFIED SPEAKER: Okay.

3 MS. BARRETT: It might be, but if you wouldn't
4 mind having a seat, I'll be right with you.

5 Would the next person -- I think it's -- is it
6 Rachel Smith or Rahel Smith?

7 RAHEL SMITH

8 MS. SMITH: Rahel Smith.

9 MS. BARRETT: If you wouldn't mind saying and
10 spelling your name. If you have any written
11 information, you might want to give it to the court
12 reporter.

13 MS. SMITH: I want to, yes.

14 MS. BARRETT: Okay, very good.

15 MS. SMITH: My name is Rahel, R-a-h-e-l, Smith.
16 I serve as Director of Human Resources for a small
17 business in San Francisco, and I've held similar
18 positions for other Bay area companies over the past
19 ten years. I'd like to vehemently state that many
20 small business owners who care about their employees
21 are not pleased with a system that does not provide
22 adequate coverage to employees injured at work.
23 Owners who care about their staff are displeased and
24 disappointed with a system that does not adequately
25 ensure that their employees are taken care of.

1 Businesses purchase workers' comp insurance not only
2 because they're mandated to do so but also because it
3 gives peace of mind to those who want to take
4 responsibility for injuries caused within their
5 workplaces.

6 I would also like to comment as an employee
7 injured at work. I was injured in 1997, and the case
8 settled in 2001 to include future medical. As I have
9 a chronic injury and permanent disability rated at 36
10 percent it is unsurprising that my condition requires
11 ongoing treatment. However, in 2004 the insurance
12 company stopped approving ongoing treatment which had
13 been enabling me to continue working pain free and
14 with reduced symptoms. The justification for stopping
15 was that treatment wasn't outlined in ACOEM. Since
16 2001 the insurance company, State Comp Insurance Fund,
17 has repeatedly quoted ACOEM as justification for
18 denial of treatment despite the fact that ACOEM is
19 clearly designed for treatment only during the first
20 90 days. Both the treating physician and the QME have
21 repeatedly recommended the treatment but the insurance
22 company -- do you need me to stop?

23 MS. OVERPECK: Thank you. I have to change
24 tapes. I'm sorry.

25 (At this point Ms. Overpeck changed tapes on the

1 recorder.)

2 DR. SEARCY: Thank you.

3 MS. OVERPECK: Thank you.

4 DR. SEARCY: Sorry for the delay.

5 MS. SMITH: Thank you. So, I'm in a situation
6 where both my treating physician and the QME have
7 repeatedly recommended the treatment, and the
8 insurance company continues to seemingly blindly quote
9 ACOEM. Unlike the person who spoke before me, I
10 actually do have specific citations, but they
11 frequently do not apply to the appropriate areas.
12 They will quote from low back area. I have no low
13 back injuries. They will quote things out of context,
14 and they will quote things that actually, when I go
15 apply ACOEM Guidelines, when I hunt them down in the
16 law library and spend dollars making copies of them,
17 which the insurance company refused to reimburse me
18 for though they are supposed to provide me with
19 copies, they actually suggest that the treatment is
20 entirely appropriate. It's completely ridiculous. As
21 an unrepresented worker it's really, really hard to
22 come up against this. If one looks at the guidelines
23 and algorithms in ACOEM, they clearly do not apply to
24 someone in my condition with a chronic injury and a
25 permanent disability. But they're being used as

1 though they do. They're being abused and misused.
2 For example, algorithm 8-2 on page 188 of ACOEM
3 recommends treatment for quote "Workers with
4 neck-related activity limitations greater than four to
5 six weeks but less than three months duration." I'm
6 clearly beyond the three month duration so this does
7 not apply. In the bottom right of that algorithm
8 ACOEM's only answer to recovery, question mark, is
9 yes, and this does not apply to a patient with an
10 ongoing disability, a 36 percent disability. I
11 believe that presumptive correctness of a treating
12 physician is more appropriate as the system used to
13 indicate. If you were to adopt ACOEM, you would be
14 doing a great justice to set parameters limiting ACOEM
15 as applicable to injuries only for the first 90 days.
16 I really implore you to be very clear about this so it
17 can't be misrepresented by the insurance companies and
18 misused.

19 While there's a chapter on chronic pain, it's
20 primarily about how to prevent pain. That chapter
21 does not address chronic injuries or how to handle
22 ongoing medical treatment for a patient who has a
23 permanent disability. Please do workers the justice
24 that they deserve and please clearly issue appropriate
25 recommendations. Clarify insurance companies are

1 obligated to continue providing treatment to
2 permanently disabled workers, and this treatment will
3 frequently fall outside of ACOEM.

4 Thank you for taking the time to hear these
5 comments. I appreciate the many hours you are putting
6 into this effort, and I hope that you'll keep the
7 injured worker perspective in mind. We frequently
8 don't have the same resources available to us as
9 insurance providers do, and since ACOEM has been
10 adopted, the insurance companies have been seemingly
11 deaf to all requests.

12 There are four points that I would like to make
13 prior to wrapping up. First, I would like to say that
14 it's taken literally years since the insurance
15 companies started denying treatment on the basis of
16 ACOEM until a hearing occurred. So, the system set up
17 to presumably provide recourse to workers do not work.
18 So you might be setting up something that in theory
19 works but in reality it doesn't. These delays are
20 difficult for patients who need treatment to keep
21 functioning. These delays in my experience have been
22 much worse since ACOEM was adopted.

23 The second point is that I'm in a distinct bind
24 regarding chiropractic treatment. I don't know if
25 this applies to other providers, but regulations

1 prevent chiropractors from accepting payment directly
2 from a payment -- from a patient if the provider knows
3 there's a workers' comp injury. I am no longer
4 allowed to say I think this works, my treating
5 physician thinks this works, the QME thinks this works
6 and helps, and the person is not allowed to treat me.
7 So I can't get treatment. I can't even pay for it out
8 of pocket. If I did want to get chiropractic
9 treatment and pay for it out of myself, I need to go
10 to a different provider and mislead them as to the
11 source of my injury. The current system not only
12 refuses to pay for treatment but also prevents our
13 independent access to treatment which seems ludicrous.
14 So, again you're setting up systems that you think
15 might work, but in actuality they don't.

16 The third point is that I submit to you a copy of
17 an insurance utilization review which is two pages,
18 and my response to it which is six pages, and you can
19 review this in written format. The UR uses ACOEM as a
20 justification for denial of coverage, but as I
21 mentioned at the beginning the UR's use of ACOEM is
22 completely out of line with my actual case. They cite
23 irrelevant sections. They take ACOEM quotes out of
24 context, and they are thoroughly illogical. They just
25 don't make sense. It's frustrating and disappointing

1 that the insurance company is allowed to behave this
2 way and that patients have no recourse. Please take
3 into account the misuse of ACOEM when considering
4 whether to implement it as a presumptively correct
5 document on an ongoing basis.

6 The fourth point is that I'm an unrepresented
7 worker trying desperately to do this on my own, and
8 the Information Assistance Officers have been not only
9 entirely inaccessible but completely useless. So,
10 again that system that you have supposedly set up as a
11 safeguard for workers is not working. Trying to get a
12 callback is hard. I've actually spoken with someone
13 and said, you know what, I'm in the middle of -- I'm
14 in the middle of a work meeting. Can you call back at
15 3 o'clock? Would that even work? Because if
16 necessary, I'll stop, and they said no problem we'll
17 call you back. No call. I've called multiple times.
18 If they don't happen to reach me when I'm there, they
19 don't call back, and I'm carrying my cell phone around
20 and frequently available. It's just not a system that
21 works.

22 So, thank you again for your time, and I
23 appreciate what you guys are doing, and I hope that
24 the end result of this will be a system that actually
25 serves to take care of workers who are injured and

1 have permanent disabilities.

2 MS. BARRETT: Thank you very much. Okay. The
3 next person is with the Injured Workers Association,
4 Maria, and I'm sorry if I get your last name wrong.
5 Is it Lozada? Injured Workers' Association. Okay.
6 All right. Steve Zeltzer.

7 UNIDENTIFIED SPEAKER: He just went to the
8 bathroom.

9 MS. BARRETT: That's okay because I'll come back
10 to him as well. The next person is -- forgive me, is
11 Dena Padilla?

12 MS. PADILLA: Dina Padilla.

13 MS. BARRETT: Dina Padilla.

14 **DINA PADILLA**

15 MS. BARRETT: If you wouldn't mind saying and
16 spelling your name, I'd appreciate it. Thank you.

17 MS. PADILLA: Sure. My name is Dina, D-i-n-a.
18 Padilla, P-a-d-i-l-l-a.

19 Well, first of all, I'm sorry to see Carrie
20 Nevans isn't here. I wanted to ask her a question.
21 Maybe you can -- what's she doing up at the Capitol
22 since the last testimony we all provided on June 29 of
23 this year? It was a hundred sixty-one pages, which
24 was hard to find by the way. Okay. I did some
25 research on ACOEM Guidelines. So, I'm going to read

1 to you pretty much what I discovered and then also a
2 few little points of my own.

3 ACOEM Guidelines and utilization review,
4 utilization review comes out of the ACOEM Guidelines,
5 was inserted into the legislation of SB899. It's also
6 a national organization. What I came out with is that
7 it's not national, it's international. It's comprised
8 of over 6,000 international health care staff, which
9 include utilization review, which comes from large
10 corporations such as Dow Chemical Company, and I don't
11 even know how they can practice medicine in the State
12 of California. It's my understanding that people who
13 treat people here in California have to be California
14 licensed.

15 ACOEM violates, at this point to me, the laws of
16 the state, and that was with the passing of SB899 by
17 Governor Schwarzenegger and the legislators who
18 co-authored the bill. The insurance carrier adjusters
19 have denied medical benefits, acting as licensed
20 doctors, which is against the laws of the state. Now,
21 under international utilization review, SB899,
22 insurance adjusters are being trained to use
23 utilization review for all medical care treatments or
24 visits to treating physicians, and it's unlawful.

25 And I talked to a CNA Insurance adjuster last

1 week and this week. She said that all insurance
2 carrier adjusters are going to meetings and they're
3 using utilization review on all medical care claims.
4 So if I go to a judge and he gives me future medical
5 care, those will be either denied or accepted by
6 utilization review. I asked her for the paragraph in
7 SB899, because I read it, and I didn't see in there,
8 that utilization review and ACOEM could be applied to
9 all claims, medical claims care. She said, her name
10 is Gail Stutters from CNA, she said that there's a
11 Labor Code and that SB899 was a summary. So I asked
12 her for the Labor Code. I want to read the Labor Code
13 and where they can have access to all medical claims
14 and overriding the judge's decision of findings and
15 award. I'm still waiting for that.

16 ACOEM is co-sponsored by Glaxo Smith and Kline,
17 one of many corporations, and is one of the largest
18 global pharmaceutical companies that are conducting
19 testing on genetics and DNA. This pharmaceutical
20 company board of directors from, comes from Great
21 Britain, the UK, and are of British royalty. ACOEM
22 Guidelines present the GNA, genetic DNA information to
23 the Department of Labor and to Washington, D.C.,
24 legislators and the President of the United States.
25 These are also investments. These investments are

1 also in the stock market. ACOEM is also supported by
2 Pfizer Drug.

3 ACOEM Guidelines were inserted as SB899 to cut
4 off past benefits, ex post facto of all injured
5 workers prior to SB899 and post-injured workers and
6 especially those who are unable to go back to work.
7 How can ACOEM Guidelines and utilization review
8 override a judge's decision and award for any medical
9 care? These same injured workers can only then rely
10 on public programs, cost shifting to the taxpayers
11 after trying for years for their medical care and
12 financial existence.

13 This is what ACOEM and utilization review is
14 meant to eliminate: Particular repetitive injuries
15 such as carpal tunnel, TOS, low back injuries, et
16 cetera. ACOEM is meant to eliminate the standards of
17 repetitive stress related injuries and disabilities.
18 ACOEM is meant to eliminate disabilities and the
19 rightful compensation. ACOEM and UR is meant to
20 eliminate medical care for seriously injured workers,
21 which I believe is the complete goal, because people
22 who have injuries that could be taken care of over a
23 short period of time don't believe this applies to
24 them, but I believe that's what ACOEM was brought in
25 for. ACOEM is meant to eliminate OSHA standards and

1 the agency itself, and bring in its own standards
2 unrelated to OSHA or AMA guidelines. ACOEM is meant
3 to eliminate real personal physicians that diagnose
4 and treat injured workers. ACOEM is meant to
5 eliminate any history of workers injured at the
6 workplace.

7 It's interesting, I talked to a gentleman who was
8 hurt on the job trying to make a complaint to
9 Cal-OSHA. Cal-OSHA said that you had to be in a
10 hospital for 24 hours before the employer makes
11 Cal-OSHA aware of the injury.

12 ACOEM is a nonprofit occ-med group that claims to
13 be experts by lowering the standards to recognize and
14 treat injured workers. ACOEM is a corporate-backed
15 nonprofit occ-med group that supplies questionable
16 research of human guinea injured worker pigs. I say
17 that because with Glaxo Smith and Kline the biggest
18 part of -- where they got their information, their
19 research, I want to know where they got it, because I
20 believe that they got it from all the injured workers
21 in the last 15 years, and it's bogus research. And
22 for them to be able to sit there and then sit there
23 and make money through Glaxo Smith and Kline. ACOEM
24 corporate guidelines was created to disable all
25 workers so that insurance companies will never, never

1 have to pay out compensation done to injured workers
2 and that those profits will go to companies like Glaxo
3 Smith and Kline, Pfizer and Dow Chemicals, et cetera,
4 for their own profit-making investments.

5 The one other little part I wanted to say is --
6 I'm almost done. This is about professionalism in the
7 worker comp arena. You don't have -- the young lady
8 just prior to me said that I & A availability is
9 non-existent. And I want to let you know that's true.
10 In Sacramento the I & A officer is more gone than
11 she's there, a whole lot more gone than she's there.
12 And to get information, we can't get information. We
13 get thwarted, we get lied to. So the availability of
14 an I & A officer, I don't see where that is, because
15 we have, I can't tell you how many injured workers
16 have tried to contact them in person and by phone to
17 no availability, or little availability.

18 There's one other point I wanted to make here.
19 Oh, yes. Probably in a worker comp central Carrie
20 Nevans made a statement that the last meeting of
21 June_29th, 2006, was hijacked by injured workers.
22 Well, I want to let you know as an injured worker
23 myself, and many others that I know, we've been
24 insulted, our rights have been trampled on, but when
25 somebody sits there and says that we hijack meetings,

1 this is a public forum meeting, public hearing. We
2 have a right to speak what we want to speak, and I
3 highly resent anybody saying that meeting was
4 hijacked. Because I'm not a hijacker, I'm an injured
5 worker trying to get my rights taken care of, trying
6 to get the care and trying to help other injured
7 workers. That's what I'm an advocate for. So the
8 hijacking word just really, really needs to go. And
9 if anything else, we've been hijacked. We've been
10 hijacked of all of our rights and our medical care and
11 our benefits and everything else that we were supposed
12 to get under the workers' compensation system.

13 Thank you.

14 MS. BARRETT: Are you Mr. Zeltzer?

15 MR. ZELTZER: Yes, I am. Yeah.

16 **STEVE ZELTZER**

17 MR. ZELTZER: My name is Steve Zeltzer,
18 Z-e-l-t-z-e-r, and I'm chair of the California
19 Coalition for Workers Memorial Day.

20 I think that what we've seen here from the
21 testimony of workers is that this whole utilization
22 review and these ACOEM Guidelines are a fraud. And
23 what's been perpetrated on the people of California by
24 you, you people and Carrie Nevans, who's afraid to
25 show up here at this hearing, is that the injured

1 workers are not getting treated and are suffering as a
2 result.

3 It is outrageous that a Chinese worker who can't
4 speak English nearly collapses cause he can't get
5 treatment, and the insurance company wants to charge
6 him. How do you think immigrant workers feel when
7 they get injured and have to go through your
8 bureaucracy, contact officers about information? How
9 do you think they feel? Who's responsible? The fact
10 of the matter is the ACOEM Guidelines and the ACOEM
11 organization, as a matter of fact, is a pro-corporate,
12 pro-management organization. Are you aware, and
13 should the audience be aware that ACOEM testified
14 against ergonomic standards and supported Bush saying
15 there shouldn't be ergonomic standards in the United
16 States. This is an organization you have as
17 guidelines? Who does this organization represent in
18 California or nationally? We say it represents the
19 insurance companies. That's why workers aren't
20 getting treated. Your whole utilization review is a
21 scheme, a bureaucratic scheme to prevent workers from
22 getting treated. It's not about proper treatment.
23 Workers should be able to go to any licensed doctor in
24 California and get treated for their injuries. That's
25 why we have to get, and this is our position, the

1 insurance companies out of the workers' comp industry.
2 They have no business. They make money by not
3 treating workers. That's how the insurance companies
4 make money, by not treating workers, and the workers
5 are being severely harmed, their lives are being
6 destroyed, and it's, it's unacceptable and
7 intolerable.

8 Dr._Larry Rose, the last medical doctor in
9 Cal-OSHA, they removed all the doctors at Cal-OSHA,
10 Schwarzenegger has removed all the doctors at Cal-OSHA
11 in a letter to you. It is important to understand
12 that the American College of Occupational and
13 Environmental Medicine, ACOEM, and the Western
14 Occupational Environmental Medical Association, WOEMA,
15 have always been dominated by corporate employed or
16 corporate practice medicine, MDs, some of their own
17 multi-clinics that are corporations that are well
18 developed in places like central valley of California.
19 Their primary focus is the present workers'
20 compensation arena, change the system, negotiate for
21 higher reimbursement, raise fees, higher fees for
22 cognitive services, written reports and play along
23 with insurance companies by dominating utilization
24 review, diagnosis and treatment decisions, which
25 usually fail to recognize the full degree of

1 disability work-relatedness and workers injured in the
2 ultimate(phonetic) industry task.

3 Put clearly, these special corporate interest
4 physicians' organizations put the interests of workers
5 compensation insurance carriers ahead of California's
6 injured and ill workers. This often leaves
7 California's 17 million employees when injured or ill
8 to encounter a non-responsive adversarial workers'
9 compensation system. This is from Dr._Larry Rose, who
10 just retired from Cal-OSHA.

11 We understand that the Director, Carrie Nevans,
12 is planning to file criminal charges against an
13 attorney because he directed, the attorney said that
14 he was not going to have doctors treat workers unless
15 they contributed to the Democrats. So, Carrie Nevans,
16 your office is directed to sue this lawyer. Why
17 aren't you suing or taking criminal complaints against
18 insurance companies who are having unlicensed
19 physicians make medical practice in California? Why
20 aren't there any criminal complaints about that? Why
21 are non-medical personnel, insurance adjusters, who
22 Carrie Nevans is, that's who Carrie Nevans is, why are
23 they making medical decisions in California? Why are
24 they preventing workers from getting treated in
25 California? Insurance adjusters, not doctors,

1 insurance adjusters. The whole utilization review
2 guideline system that you have in place is established
3 and set up by the corporate interest, the insurance
4 companies, Warren Buffett and others to prevent
5 injured workers from being treated so they can make
6 billions of dollars in profits. That is what's going
7 on here. And the deaths and the continued injuries of
8 workers here are on your responsibility, on your
9 shoulders and Carrie Nevans personally because you're
10 allowing this corrupt system to operate as it is.

11 The failure of California to take care of injured
12 workers is leading to these injured workers being cost
13 shifted to the disability insurance. There's been a
14 sky rocket increase in disability insurance from
15 workers' comp claims. There's been, workers are being
16 forced to go to SSI, go on SSI to get their injuries
17 taken care of. Barbara Clark just recently had to
18 have an operation paid for by the federal government
19 because the Seventh Day Adventist corporation would
20 not pay for it, even though it was an injury as a
21 result of her work. There's a massive cost shifting
22 going on.

23 We believe it's a criminal conspiracy by the
24 insurance companies to cost shift. They're saying to
25 workers like Wal-Mart get your health care taken care

1 of some place else. They're conspiring. That's what
2 the insurance companies and company doctors are doing.
3 They're conspiring to avoid paying their legally
4 required costs, and they're sending workers some place
5 else, public hospitals. Joe Dowell, who was injured
6 at Lowe's hardware store in San Mateo, they sent him,
7 they either sent him to a public -- he goes to a
8 public agency in San Francisco to get his injuries
9 taken care of. We believe that Carrie, that the
10 department, if it really represented the people of
11 California, would be filing criminal charges against
12 these corporations and insurance companies for
13 shifting costs, for defrauding the people of
14 California, for forcing the public and the citizens to
15 pay taxes because they refuse to pay for their cost.
16 That's precisely what's going on in California. This
17 utility, this utilization review is part of that
18 shifting because it's a means of preventing workers
19 from getting their care taken care of.

20 Lastly, we want to say that the, the money that's
21 spent here by Carrie Nevans, you have about 30, 40
22 highway patrolmen outside, you have five or six cars.
23 Who are they protecting? Who are they here for? The
24 injured workers? Are injured workers threatening the
25 State of California? Thousands and thousands of

1 dollars, maybe 20, 30 thousand dollars is here outside
2 supposedly to protect the people of California. Why
3 don't you use that money to take care of the workers
4 here? Why don't you respond to workers who call your
5 offices and can't get responses, can't get answers to
6 why they're being basically screwed by the insurance
7 companies? Instead, you have the highway patrol here.
8 That's your answer to injured workers. It's an
9 insult, it's a disgrace, and it's only going to get
10 worse because it's a systemic problem.

11 This ACOEM is an example of a systemic problem.
12 Doctors, licensed doctors in California should be able
13 to treat workers without having to go through a
14 bureaucratic convoluted process to treat workers. And
15 what you're saying with this ACOEM process is that's
16 the way it's going to be. And not only that, even the
17 Commission on Health and Safety and Workers'
18 Compensation is saying the ACOEM Guidelines are not
19 proper guidelines because there are other guidelines
20 that can be used that are more appropriate, and you're
21 ignoring that. Well, whose interest are you
22 representing? Whose interest are you representing?
23 It's the insurance companies that you represent here.
24 That's where these determinations are being made by
25 Carrie Nevans. She's not brave enough to show her

1 face here, but that's who she's representing, the
2 insurance companies. And we, the injured workers and
3 the public of California are getting sick of it, are
4 getting sick of the insurance company destroying the
5 lives of injured workers and basically ripping off the
6 people of California.

7 Thank you.

8 MS. BARRETT: Thank you very much. Is Maria
9 Lozada here with the Injured Workers Association?
10 Okay.

11 I'm sorry if I mispronounced your name. Is it
12 Naleen Verbeten?

13 DR. SEARCY: Nileen.

14 MS. BARRETT: Nileen?

15 MS. VERBETEN: Nileen Verbeten.

16 MS. BARRETT: Sorry. I'm very sorry about that.

17 MS. VERBETEN: Thank you very much.

18 MS. BARRETT: If you wouldn't mind saying your
19 name. I so totally abused it.

20 **NILEEN VERBETEN**

21 MS. VERBETEN: It's Nileen, N-i-l-e-e-n,
22 Verbeten, V-e-r-b-e-t-e-n. I'm with California
23 Medical Association. I have provided written comments
24 already.

25 Dr._Searcy, and other representatives of the

1 Division, thank you very much for the opportunity to
2 speak today. We have a fairly long written testimony.
3 My remarks will be certainly much shorter. But
4 generally, I would like to comment on each section of
5 the proposed regulations.

6 Many of our speakers preceding me today have
7 already spoken to the issue of definitions as it
8 relates to acute and chronic. We point out that there
9 is no medical evidence to substantiate three months as
10 a break period between one and the other. We are not
11 opposed to the definition, but we, like many previous
12 speakers, are very concerned with the application by
13 the claims adjusters or claims administrators, and
14 fear that there will be great mischief as they look at
15 these issues. We are very concerned that there are
16 many conditions that are persistent, and these
17 conditions are frequently being given short shrift
18 because they don't follow the neat and tidy response
19 that is set forth in the guidelines.

20 On the Medical Treatment Utilization Schedule
21 itself, we very much appreciate the Division sort of
22 restating the intent that these guidelines are an
23 analytical frame work. They do not constitute a
24 cookbook or literal guide. We do appreciate the
25 Division understands that we are sympathetic with

1 speakers who have gone forward who suggest that the
2 claims administrators either do not understand that or
3 choose not to understand that. We have many, many
4 complaints where physicians have extraordinarily
5 literal interpretations of these guidelines, and so we
6 have great concern that while they have a very
7 appropriate use when in the right hands, they are
8 clearly not being used properly.

9 On the manner of the hierarchy of evidence, we do
10 support the hierarchy that has been identified as
11 labels A through C and certainly reinforce that those
12 seem to be appropriate, and we concur with their use.
13 We are somewhat dismayed that level D as ACOEM set
14 forth is not listed. We believe it needs to be
15 restored. There is an enormous amount of medical care
16 that is very appropriate that nobody can contest but
17 has no basis in randomized control trials or strong
18 research that it is efficacious. We just know it is.
19 Some easy examples: There are no random control
20 studies that say removal of a foreign body is superior
21 to leaving it there, but we don't question that.
22 Broken arms, we could just say there's no randomized
23 trials that suggest that setting those arms are an
24 improvement over not setting them, but we don't
25 question that. We can identify with those injuries

1 and we can appreciate the need to deal with them and
2 deal with them properly. We're very concerned that
3 much of what is being denied now by carriers as not
4 being based in evidence clearly does have
5 substantiation. We believe some evidence of your very
6 own writing in terms of the Initial Statement of
7 Reasons more than adequately stresses the infantile
8 nature of evidence-based medicine and the fact that we
9 do not have any superior sources of information, of
10 guidelines that are addressing the scope of issues
11 that workers are experiencing. So we really do
12 believe we need to go beyond the current ACOEM. While
13 we do support ACOEM, we do not believe that it is
14 sufficient.

15 In my written comments I provide a rather tongue-
16 in-cheek research paper from the British medical
17 journal that points out with great detail the lack of
18 any evidence to support the proper use or the efficacy
19 of parachutes and call for an open source of
20 volunteers for randomized control trial.

21 In terms of the Medical Evidence Evaluation
22 Committee, we think this is a marvelous idea and
23 support it. We have provided some material that is
24 used by Medicare in a relatively equivalent committee
25 called the Carrier Advisory Committee, and I was able

1 to find the Medicare carriers' manual description
2 describing that and offer that as a potential model to
3 investigate as you look at establishing this
4 committee. We are concerned that this committee be
5 properly supported and make sure that there are
6 individuals available to do the research that this
7 committee is going to need, for it will be
8 substantial.

9 We do request consideration of a couple
10 additional physicians on this advisory committee. We
11 note the absence of a representative from neurosurgery
12 or neurology. I believe that would be an important
13 addition. We also would ask for consideration of a
14 representative from the state medical society. There
15 are many medical specialties that are not represented
16 on this committee. We appreciate that trying to
17 represent them all would not be efficient, and so we
18 would ask that that deficiency be corrected that way.
19 And then in terms of the three -- the three members
20 that the Division would appoint, we would ask that at
21 least one of them be drawn from the medical research
22 committee with experience in evaluating strength of
23 medical literature in terms of the hierarchy that's
24 being used. We think this will assist with
25 deliberations of the committee and assist the Medical

1 Director as she struggles with these very important
2 issues.

3 Thank you for the opportunity to comment.

4 MS. BARRETT: Thank you very much.

5 Dr._Meredith Saunders, U.S. HealthWorks.

6 **MEREDITH SAUNDERS, M.D.**

7 DR. SAUNDERS: Good morning. I'm Dr._Meredith,
8 M-e-r-e-d-i-t-h, Saunders, S-a-u-n-d-e-r-s. I'd like
9 to thank Dr._Searcy once again and the Division for
10 their ongoing consideration of providers' needs and
11 truly helpful attitude.

12 The RAND study performed in 2004 revealed that
13 ACOEM Guidelines do not match the Labor Code
14 guidelines of being evidence based on scientific data.
15 As a Regional Medical Director for U.S. HealthWorks, I
16 split my time between patient care and administrative
17 work, and truly the ACOEM Guidelines are not meeting
18 my practice needs, particularly with regard to
19 internal medicine.

20 I won't take up a lot of time. Some of this is
21 repetitive. Briefly, I specifically recommend that a
22 broader panel of specialty providers, including, but
23 not limited to, neurology, psychiatry, occupational
24 medicine, orthopedic surgery, neurosurgery, internal
25 medicine and physical medicine and rehabilitation be

1 selected to establish practice guidelines. That will
2 reflect the reality of care from the injured worker.

3 While a gallant effort, I'm sure, the ACOEM
4 Guidelines leave gaps and actually present challenges
5 to the delivery of expeditious medical care. Denials
6 and delays are occurring that prevent employees,
7 employers and patients from moving forward to meeting
8 their goals. It is my belief that the ACOEM
9 Guidelines were not established for the purpose of
10 utilization review. Indeed, Barry Eisenberg, the
11 Executive Director of ACOEM, has stated that these
12 recommendations are suggestions and not mandates.

13 Again, I would like the Division to quickly
14 consider broadening the scope of the specialty
15 providers on the board to establish these practice
16 guidelines.

17 Again, thank you for your consideration.

18 MS. BARRETT: Thank you very much for coming in.

19 Is Diane Przepiorski -- I'm sorry.

20 **DIANE PRZEPIORSKI**

21 MS. PRZEPIORSKI: My name is Diane Przepiorski.
22 It's P-r-z-e-p-i-o-r-s-k-i. I'm the Executive
23 Director of the California Orthopedic Association
24 representing orthopedic surgeons throughout
25 California.

1 First of all, we really do appreciate again an
2 opportunity to be before you here today to talk about
3 the treatment guidelines. And I personally really
4 appreciated the Division's extensive Statement of
5 Reasons. I thought that was very enlightening as to
6 the, really, the thought that the Division went
7 through trying to wrestle with treatment guidelines.
8 And, you know, I think it also is becoming very
9 evident to us all that even our national professional
10 organizations have had a very difficult time
11 struggling with trying to develop treatment guidelines
12 that would be applicable to all care.

13 I came to the meeting today convinced initially
14 that ACOEM just does not apply to chronic conditions,
15 and you heard that from many speakers, and we just
16 don't see the science behind ACOEM applying to chronic
17 conditions. After the testimony that I heard this
18 morning, I'm really kind of wondering if they're
19 really applicable for the acute stage. And, you know,
20 I just don't think the Division knows at this point.
21 There's so much literal interpretation of the ACOEM
22 Guidelines going on out there whether it's, as Nileen
23 points out, whether on purpose or by design or by
24 accident. I just don't think we even know if ACOEM is
25 being applied correctly for the acute stage. So, to

1 try to get our hands around that I would urge the
2 Division to take a step back, and we definitely would
3 oppose these regulations applying to the chronic
4 stage. So, we think that language should come out of
5 the regulations. And I really do think it would help
6 to put a time frame around the application of ACOEM.
7 Whether it be the first 45 days, 60 days, 90 days of
8 care, and get a better idea of how that works first
9 before we even talk about the chronic stage. And so
10 the two things I would urge is that there not be a
11 reference or there not be an admonition that ACOEM
12 also applies to the chronic stage, and that I would
13 put a time frame in to give direction to the community
14 as to just what time frame ACOEM does apply to. And
15 we would suggest 60 to 90 days.

16 On the second part on 9792.23 we very much
17 support the creation of a medical advisory committee.
18 We think this is critical to help the Division work
19 through some of the problems that are being expressed
20 here today, whether you're talking ACOEM or other
21 treatment guidelines. You know, I'm seeing members
22 that get the long rendition of ACOEM citations but
23 then they throw in guidelines from other companies as
24 well, and, you know, to expect the treating physician
25 to respond to each and every one of those points, many

1 of which are not really relative to the actual
2 treatment of and the condition of that patient is just
3 unreasonable, and it's not going to happen. And
4 particularly since there's no reimbursement to the
5 physician to go through each and every point. So, we
6 very much support another body that could help provide
7 some review of the medical literature or the
8 consensus-based medicine that does work and would like
9 to expand on comments that CMA made about this
10 Medicare model. Medicare and National Heritage here
11 in California has for years convened. I think it's at
12 least twice a year. It may be a little more
13 frequently. What they call a California Carrier
14 Advisory Committee. It is composed of a
15 representative from each of the recognized medical
16 specialty organizations, and I would agree that for
17 workers' comp that would not necessarily be necessary
18 or appropriate. It should just have one
19 representative from each of the medical society,
20 medical societies that treat injured workers. So, you
21 wouldn't need necessarily a pediatrician and some of
22 the other medical specialities on it. But each
23 person, the state-wide association appoints this
24 person. So, the onerous isn't on the Division to try
25 to magically come up with the most appropriate

1 orthopedic surgeon or neurosurgeon or whatever. It's
2 up to the state orthopedic association to appoint that
3 person. In addition, CMA is represented on that CCAC
4 and, I think, they do add good input not only from a
5 state-wide but from a national input because they work
6 more with CMS on a national level. I would even go so
7 far to say as I think it would be appropriate to put a
8 representative from the payer community, whether it be
9 a workers' comp carrier or representative from the
10 self-insured employers. I think it would be critical
11 that it be their medical director so that they can
12 really provide input on medical issues, but I think
13 that this structure should represent all the parties
14 that are involved in the workers' comp arena.
15 Otherwise the Division is just going to be, as you've
16 already heard different people saying, there should be
17 different specialties represented and there's no right
18 answer to that. You might as well involve them all.
19 The key I think to the committee that Medicare has
20 formed is that, when there is an issue under
21 consideration, they form a subcommittee of the
22 specialty societies of the specialties that are
23 directly affected by the policy. If it's low back,
24 they get together the providers that are part of low
25 back, whether it be orthopedic surgeons, neurosurgery,

1 chiropractor, whatever specialty is involved. They
2 start with a draft of the policy that National
3 Heritage provides, and I would think that would be
4 most productive here as well. And then DWC would
5 convene the subcommittee and let the medical experts
6 comment on the draft proposal. And once there's some
7 consensus of this draft, and we believe there should
8 definitely be a written document that comes out of
9 this work, it ultimately would provide the best
10 direction to the Division. It would provide the best
11 direction to the carriers, and to the medical
12 providers if this advisory committee produces a
13 written document that everyone can see. We think the
14 subcommittee should present then their work to the
15 advisory committee as a whole. The advisory committee
16 as a whole should be a public meeting where people can
17 see the process work and see the deliberative nature
18 of the process, and I can tell you that it's worked
19 well in the Medicare world. Perhaps the issues are
20 maybe not quite as contentious in the Medicare world,
21 but I think it would be a good avenue and good way for
22 the Division to hear from the experts in the medical
23 community.

24 Finally, I think this subcommittee should be
25 allowed to bring in experts, and that could be at the

1 discretion of the Medical Director. You know it would
2 be impossible for us to appointment an orthopedic
3 surgeon that we would call an expert in all the
4 different musculoskeletal areas. So, I think it's
5 just most productive and you would come up with the
6 best work product to just get the experts involved.
7 Let them hash out the medical issues and try to reach
8 agreement, and then present the document to the CCAC
9 as a whole. I think it's in line, obviously it would
10 need some support from the DWC, I think it's in line
11 with what you're proposing in the regulations, but it
12 just gives a little broader representation which we
13 think would be critical to reaching agreement on these
14 issues.

15 Thank you very much.

16 MS. BARRETT: Thank you very much. Ted Pribe.
17 It's the National Oriental Medicine Accreditation
18 Agency. I'm so sorry. Priebe. How do you say your
19 name?

20 MR. PRIEBE: Priebe.

21 MS. BARRETT: Sorry. Priebe.

22 **TED PRIEBE**

23 MS. BARRETT: If you wouldn't mind again saying
24 and spelling your name.

25 MR. PRIEBE: Certainly. I appreciate the

1 opportunity to speak today. I represent the National
2 Oriental Medicine Accreditation Agency.

3 MS. BARRETT: One minute. Your name is spelled,
4 is it P-r-i-e-b-e?

5 MR. PRIEBE: Correct.

6 MS. BARRETT: And it's Ted, T-e-d?

7 MR. PRIEBE: Correct.

8 MS. BARRETT: Thank you.

9 MR. PRIEBE: I'm the Executive Director of NOMAA,
10 which is the National Oriental Medicine Accreditation
11 Agency. We provide standards and criteria for
12 evidence-based first professional entry-level
13 doctorate degrees in this country. I've also been a
14 practitioner in California for 25 years as well as
15 I've worked on most all of the evaluation committees
16 for workers' comp and utilization review for the past
17 15 or so years since 1990. Sorry. We -- it's
18 unfortunate that the ACOEM Guidelines don't have to
19 meet the same requirements that all the specialties
20 are going to be required to meet as far as the
21 evidence-based requirements outlined in the new
22 regulations. This has set up a most difficult problem
23 in the area of acupuncture or healing therapy in that
24 that's been effectively removed from the system over
25 the past two years since the adoption of ACOEM. We've

1 only received denials from every insurance company and
2 every utilization review company in the state.
3 There's very few of us that still practice within the
4 work comp system based on functional improvements
5 which we have to show, just as other medical
6 specialties do. And I know this affects all the other
7 medical specialties as well as ours in relation to
8 these guidelines when we have to meet a different
9 standard than ACOEM does even though they're
10 presumptively correct in law. Especially in my field,
11 there is no evidence-base supplied by ACOEM
12 Guidelines. Our guidelines have been rejected by
13 ACOEM in a number of ways, not just through the
14 utilization review process, but also even -- even as a
15 participant on some of the utilization review
16 committees which I have been involved in, especially
17 the last one that was set up. In that it was
18 dominated primarily by ACOEM and insurance providers,
19 and we had no real input or interchange into the
20 review at all.

21 I don't want to take up a lot of time because I
22 know other people have things to say.

23 Ms. OVERPECK: Can you stop for a second please.

24 MS. BARRETT: While we change the tape.

25 (At this point Ms. Overpeck changed the tape on

1 the recorder.)

2 MS. OVERPECK: Thank you. All right.

3 MR. PRIEBE: Thanks. Guidelines are just that.
4 They're supposed to be guidelines to guide you to
5 practice medicine, and medicine is a practice. We all
6 practice in our own specialties. The practice
7 of medicine is not a science. It's the application of
8 this science to get the best results in order to come
9 up with guidelines that lead you to better outcomes.
10 You can't do that when you have guidelines that are
11 presumptively correct that don't meet that standard.
12 So, I'm hoping that with the -- this new medical
13 review process that we get an opportunity to finally
14 change that direction and go up towards real
15 evidence-based medicine which will benefit the
16 outcomes of patients. Thank you.

17 MS. BARRETT: Thank you very much.

18 DR. SEARCY: We're just discussing lunch, which
19 is an important subject too. So, what we're thinking,
20 it looks like, if we go at the present rate, that we
21 probably have another two or three hours of peoples'
22 testimony. So, we would like to go a little bit
23 longer, maybe half an hour or so, and then take a
24 break. So, a break is coming. Just wanted to let you
25 know.

1 MS. BARRETT: Peggy Sugarman.

2 MS. OVERPECK: She just walked out.

3 MS. BARRETT: Okay.

4 UNIDENTIFIED SPEAKER: Will everybody get a
5 chance?

6 DR. SEARCY: Oh, definitely. We will stay for
7 the whole time. Everyone will have an opportunity for
8 sure.

9 MS. BARRETT: All right. Francisco Plasencia.

10 **FRANCISCO PLASENCIA**

11 MS. BARRETT: If you wouldn't mind saying and
12 spelling your name.

13 MR. PLASENCIA: My name is Francisco, just like
14 San Fran, Plasencia, P-l-a-s-e-n-c-i-a, and I'm with
15 the VotersInjuredatWork. I came in support with
16 Peggy.

17 All I really have to say is I agree with what
18 everybody, all the injured workers are saying. We're
19 being denied everything; medicine, chiropractic, you
20 name it, and we hope that you do something about it.
21 Please, we're asking. Thank you.

22 MS. BARRETT: Thank you very much. Don Schinske.

23 **DON SCHINSKE**

24 MR. SCHINSKE: Hi, I'm Don Schinske. I'm here
25 today on behalf of two organizations. One is WOEMA,

1 the Western Occupational Environmental Medical
2 Association, which is the western region component
3 society of ACOEM. I'm going to defer those comments
4 from WOEMA to Dr._Schumann who's going to talk about
5 the various ways in which ACOEM is enhancing its
6 guidelines and their usefulness hopefully to the
7 system. I'm also here today to deliver a couple of
8 comments from the California Academy of Family
9 Physicians. There are seven thousand practicing
10 family physicians in the state of California. A
11 typical F.P. will devote 10 or 15 percent of his or
12 her practice to work comp cases. We believe that
13 represents -- they're probably the most heavily
14 represented specialty within the workers' comp system
15 I believe. As a result I think that, you know, they
16 serve as a P.T.P. on a -- P.T.P.s on a significant
17 number of work comp cases, and I think a seat should
18 be rightfully designated as P.T.P. on the advisory
19 committee.

20 Our second request is that one of the seats has
21 been mentioned earlier be dedicated to an expert of no
22 particular affiliation who is simply an expert on a
23 clinical research. Thank you.

24 MS. BARRETT: Thank you very much. Peggy
25 Sugarman. Is that right? Very good. Thank you. If

1 you wouldn't mind saying and spelling your name I
2 would appreciate it

3 **PEGGY SUGARMAN**

4 MS. SUGARMAN: Thank you. Sorry I missed my call.
5 My name is Peggy Sugarman, S-u-g-a-r-m-a-n. I'm here
6 on behalf of VotersInjuredatWork.org. And thank you
7 for the opportunity to comment on the Medical
8 Treatment Utilization Schedule.

9 VotersInjuredatWork.org is a non-profit
10 organization that represents the interests of
11 employees injured in the service of California's
12 employers. And just to talk about medical treatment,
13 maybe it's obvious, but all injured workers regardless
14 of whether they lose time or not receive medical
15 treatment under the workers' compensation system. So,
16 of course, the medical treatment guidelines and the
17 delivery system is of paramount importance to the
18 workers' compensation system. California has been
19 employing the ACOEM Guidelines on an interim basis as
20 the presumptively correct standard of medical
21 treatment for about the last year and a half, and
22 prior to that for several months as well before they
23 were not the presumptively correct guideline. And
24 given this length of time we've had a chance to see
25 how the guidelines have worked. In addition there's

1 been litigation challenging the applicability of the
2 guidelines, and it has shed light on some very
3 relevant issues. So, the -- we now are proposing to
4 permanently adopt ACOEM as the presumptively correct
5 standard for treatment despite a very lackluster
6 evaluation from the RAND team who reported in November
7 of 2004 that all of the guidelines that they reviewed
8 and I quote "barely meet standards" unquote.
9 Stakeholder interviews, when that report was being
10 prepared, confirmed that the ACOEM Guideline has quote
11 "been applied to topics that it addresses only
12 minimally or not at all." For example, chronic
13 conditions, acupuncture, medical devices, home
14 healthcare, durable medical equipment, and toxicology.
15 So, to deal with these identified deficiencies the
16 RAND report suggested that ACOEM be adopted along with
17 other guidelines, and at the time the AAOS guidelines
18 were recommended. We understand those have been
19 withdrawn. But in addition to additional guidelines
20 they recommended that the state proceed as quickly as
21 possible to deal with certain areas where they felt
22 that ACOEM did not perform well. Those areas are
23 physical therapy of the spine and extremities,
24 chiropractic manipulation of the spine and
25 extremities, spinal and paraspinal injection

1 procedures, magnetic resonance imaging of the spine,
2 chronic pain, occupational therapy, devices and new
3 technologies and acupuncture.

4 So, since that time, and again we're talking
5 November of 2004, there have been a lot of problems
6 with the treatment delivery system. Some, of course,
7 are the result I think of utilization review delays
8 and improper use of the ACOEM guidelines. But the
9 problems that were reported to the RAND team in 2004
10 still are continuing today. And I believe these
11 regulations do little to address those issues.
12 Specifically, we are completely opposed to section
13 9792.22 that makes ACOEM applicable to chronic
14 conditions. We have seen the newsletter that ACOEM
15 has put out that suggests that guidelines are
16 applicable. However, there's a big difference between
17 using ACOEM as a guideline to suggest possible medical
18 approaches to a work-related injury and making it a
19 presumptively correct standard of care for chronic
20 conditions. These are two entirely different
21 concepts.

22 The RAND research highlighted problems with ACOEM
23 being applied to chronic conditions. There are also
24 current cases where the applicability of ACOEM was
25 successfully challenged in the courts. In Hamilton

1 versus State Compensation Insurance Fund the WCAB
2 denied reconsideration of a judicial award of medical
3 treatment alleged by the defendants to be contrary to
4 ACOEM. The trial judge determined and the WCAB denied
5 reconsideration that ACOEM Guidelines apply only to
6 the treatment of acute injuries. They based their
7 decision on the language of the ACOEM Guidelines. So
8 in Hamilton the judge referred to the statement in
9 Chapter 12, low back, that clearly states, quote,
10 "Recommendations on assessing and treating adults with
11 potentially work-related low back problems, i.e.
12 activity limitations due to symptoms in the low back
13 of less than three months duration are presented in
14 this clinical practice guideline." ACOEM makes a
15 similar statement in Chapter 13 governing knee
16 complaints. I'm going to quote. "Recommendations on
17 assessing and treating adults with potentially
18 work-related knee problems are presented in this
19 clinical practice guideline. Topics include the
20 initial assessment and diagnosis of patients with
21 acute and sub-acute knee complaints." The same
22 language exists for Chapter 14 ankle and foot
23 complaints and in Chapter 15 for stress-related
24 conditions. In the very first sentence it says, "This
25 guideline is intended to help occupational physicians

1 and primary care practitioners manage employed
2 patients with acute stress-related conditions of
3 relatively short duration." Clearly this chapter
4 should not be used as a standard of care for those
5 workers who are losing time due to stress-related
6 conditions beyond a short term.

7 So, the application of ACOEM to patients with
8 serious chronic conditions, particularly those with
9 multiple injuries that overlap one another, can limit
10 necessary care. And just to consider the difficult
11 medical problems of one of the Voters Injured at Work
12 board members Steven Duncan. Mr. Duncan is a survivor
13 of the 1999 Tosco Oil Refinery explosion where four of
14 his co-workers were killed in an explosion. He
15 survived by leaping off the fractionator tower while
16 on fire landing on the roof of a building after
17 falling some 50 plus feet. He has had 50 surgeries,
18 lost part of one hand, suffered severe facial
19 injuries, broke untold number of bones in his legs,
20 and supports the after effects of severe burns. Today
21 he has also been diagnosed with heterotopic
22 ossification meaning that he has calcium deposits
23 growing in his muscle tissue which may require another
24 surgery. He also has increasing problems with sleep
25 apnea as a consequence of the facial injuries where

1 his face was depressed by about an inch and a half,
2 and as a result of the sleep apnea, he only gets
3 minimal sleep at night. Now ACOEM says nothing about
4 sleep apnea, care for severe burns, hetatopical
5 ossification, facial fractures, nor does ACOEM discuss
6 the need for whatever support services as might be
7 necessary to manage chronic long-term medical
8 problems.

9 I'm also told that Mr. Duncan was denied car
10 service now because his treatment is not in ACOEM or
11 the car service is not in ACOEM. He has sleep apnea
12 so I don't know -- I don't know that he should be
13 driving.

14 But we urge the Division in any case to
15 reconsider its position on the matter. To promulgate
16 such a regulation may endanger the health of injured
17 workers and prevent or delay access to medical
18 treatment that may assist workers with their overall
19 functioning, and by attempting to make it applicable
20 to conditions where it clearly is not by virtue of a
21 regulation you will make the problems worse, increase
22 litigation, and further delay necessary treatment.

23 On a more technical note in Section 9792.21(c) --

24 MS. BARRETT: Ms. Sugarman, we're running out of
25 time.

1 MS. SUGARMAN: Okay. I have a couple more
2 minutes here. Treatment shall not be denied on the
3 sole basis that the condition or injury is not
4 addressed by ACOEM. This is inconsistent with
5 existing section 9792.8 that states that treatment may
6 not be denied on the sole basis that the treatment is
7 not addressed by the ACOEM Guidelines. So, proposed
8 9792.21(c) should be changed to reflect the existing
9 rule.

10 Quickly, we would support the creation of a
11 Medical Evidence Advisory Committee. We suggest that
12 the Medical Director be required to select from a list
13 of physicians who are board certified providers and
14 members in their specialty societies as appropriate
15 and who actively practice in those fields. It also
16 makes sense to have the committee begin work
17 immediately on the list of priority items identified
18 by the RAND report and listed earlier, and finally we
19 suggest -- support the suggestion of the California
20 Labor Federation in its written comments you have to
21 add a physician's clinical judgment in the hierarchy
22 of evidence to allow for medical treatment to proceed
23 where no published empirical evidence exists to
24 address that treatment. This is particularly
25 important for those workers who have serious but rare

1 complications of diseases and for whom experimental
2 treatment might be recommended. We're supporting the
3 comments of the California Medical Association as well
4 as the California Orthopedics Association, and just --
5 I want to make sure that the working paper from the
6 RAND that was issued by RAND in November of 2004 is
7 part of the rule-making file.

8 If you need me to get my copy, I will.

9 DR. SEARCY: I think we have a copy. Thank you.

10 MS. SUGARMAN: Okay. Thank you very much.

11 MS. BARRETT: Sandra Carey.

12 **SANDRA CAREY**

13 MS. BARRETT: If you wouldn't mind going ahead
14 and saying your name correctly and spelling it if you
15 wouldn't mind. Thank you.

16 MS. CAREY: Yes. My name is Sandra Carey.
17 S-a-n-d-r-a. C-a-r-e-y. I offer testimony today on
18 behalf of the Council of Acupuncture and Oriental
19 Medicine Associations. Thank you for this opportunity
20 to appear before you on the subject of the proposed
21 regs. As we all know these proposed regulations have
22 their genesis in workers' comp reform legislation of
23 2003/2004. We also know an unintended consequence of
24 that reform legislation was the virtual removal of
25 acupuncture from the workers' comp system, thereby

1 robbing injured workers and the workers' comp system
2 of this proven successful and cost-effective medicine.
3 Though there are those who would claim otherwise,
4 there is no debate about the efficacy of this medicine
5 and the results that have ensued from its use for
6 injured workers. What does seem to be in debate is
7 how to get this medicine to the patient. And so here
8 we are. The subject of workers' comp reform
9 legislation mandated that the Administrative Director
10 adopt comprehensive medical guidelines or treatment
11 utilization schedules for all modalities utilized
12 within the workers' comp system. The Administrative
13 Director was to accomplish this task by the end of
14 2004. Clearly we are well beyond that deadline date.
15 The reform legislation further directed that until,
16 and only until, these comprehensive guidelines were
17 developed and adopted that the ACOEM Guidelines would
18 be deferred to and considered presumptively correct
19 for that period. The state contracted with the RAND
20 Corporation, which you've heard many times today, to
21 do an in-depth study of all available medical
22 treatment guidelines including ACOEM to determine
23 completeness and sufficiency. RAND found that ACOEM
24 Guidelines were deficient and inadequate. That they
25 were not comprehensive. That they did not address

1 acupuncture and others -- and other modalities in a
2 sufficient or comprehensive manner.

3 They further determined that to develop truly
4 comprehensive medical guidelines is an almost
5 impossible task, given the diversity of several
6 modalities within the workers' comp system. And,
7 indeed, the Administrative Director instructed the
8 Council of Acupuncture and Oriental Medicine
9 Associations to develop peer-reviewed evidence-based
10 treatment guidelines for acupuncture as a specialty
11 guideline, to confer with the RAND corporation for
12 guidance in achieving sufficiency in such guidelines
13 and to submit such guidelines to the Administrative
14 Director by December of 2004.

15 CAOMA, in partnership with numerous medical
16 experts, did just that. They developed the
17 acupuncture and electroacupuncture evidence-based
18 treatment guidelines December 2004. These guidelines
19 are peer reviewed. They are nationally recognized.
20 They are research, evidence and result based. In
21 fact, they are compliant with the mandates and
22 requirements of the National Institutes of Health, the
23 Academy of Sciences, the Institute of Medicine and
24 National Academy's report on complimentary and
25 alternative medicine therapies in the United States,

1 and they have been accepted by the National Guidelines
2 Clearing House. There is no question of their
3 veracity, their evidence base, their peer review or
4 their national recognition.

5 The Acting Administrative Director has not
6 adopted these guidelines after almost two years.
7 Consequently and unfortunately, the results of this
8 inaction are widespread denial of acupuncture for
9 injured workers. And now the Administrative Director
10 has proposed status quo for injured workers, proposed
11 to make the ACOEM Guidelines a permanent and sole
12 treatment guideline structure for this system, all the
13 while knowing these guidelines are not comprehensive
14 and are inadequate and incompetent in treatment for,
15 for, a cost effective treatment for injured workers.
16 She has suggested that conflicting recommendations for
17 various specialty modalities would be confusing to the
18 provider, the employer and the claims adjuster.

19 I must tell you, if this weren't so astonishing,
20 it would be amusing. Are we saying that we provide
21 only traditional western medicine treatment for
22 injured workers because to provide otherwise is just
23 too confusing? Are we agreeing, as these proposed
24 regulations have suggested, that the only way an
25 injured worker can get the optimum medical procedure

1 is to enter into a rebuttal process, which we all know
2 is just another term for quicker(phonetic) injury or
3 your pain on hold for the next six months? Are we
4 suggesting that patients do not have the right to
5 effective treatment of a more natural and less
6 invasive sort because it is just too perplexing? That
7 is not only utter nonsense, but it is also in direct
8 contravention of the law. Acupuncture has been an
9 accepted medical protocol in the workers' comp system
10 for almost 20 years, and now it is just too
11 complicated for the folks at Division of Workers' Comp
12 to figure out how to effectively provide it to the
13 patient?

14 Section 9792.21, the proposed rule making,
15 states: "The ACOEM Guidelines are intended to assist
16 the medical treatment providers by offering an
17 analytical frame work for the evaluation and treatment
18 of injured workers, that they are intended to help
19 those who make medical treatment decisions regarding
20 the care of injured workers understand what treatment
21 has been proven effective in providing the best
22 medical outcomes to the workers."

23 Now, how do you think the ACOEM Guidelines are
24 going to be able to do all that intending and
25 analyzing and assisting when they do not include all

1 the modalities that are supposed to be made available
2 to the patient? We do not accept this, and we reject
3 the proposed regulations on the basis of the fact that
4 they are inadequate, deficient and in violation of the
5 word and intent of California statute. We would ask
6 the Administrative Director and the Division of
7 Workers' Compensation to remember that the purpose of
8 the guidelines is to insure that legitimate and proven
9 health care is provided on the basis of results and on
10 a cost effective basis. So, for example, very
11 positive procedures are not repeated, repeatedly
12 utilized when there is no positive outcome for the
13 patient, as has been the case very often with
14 traditional medicine in the workers' comp system. The
15 guideline is a positive result measure, which is the
16 only result measure of relevance, using the different
17 protocols.

18 The Administrative Director has reportedly made
19 the determination that adoption of these regulations
20 will not eliminate jobs or businesses within
21 California. She has further represented that adoption
22 of these regulations will not have a sufficient
23 adverse economic impact on the private persons or
24 directly affected businesses. I must tell you, there
25 seems to be an avoidance of the obvious in these

1 representations. While it might not be of sufficient
2 import to the Administrative Director, it is of
3 enormous import to the many practitioners of
4 acupuncture whose practices have all been wiped out.
5 It is of significant import to the private persons or
6 directly affected businesses who are unable to go back
7 to work or resume their businesses because they are
8 unable to receive relief that will alleviate their
9 pain and suffering.

10 We must respectfully request that the
11 Administrative Director and her staff go back to the
12 drawing board, and hopefully with a more proactive and
13 inclusive approach that has been mandated by the
14 California state legislature. To adopt regulations
15 that defy the intent of the law and systematically
16 eliminate legitimate and lawful medical protocol from
17 this system is not only negligent, but it is
18 irresponsible.

19 We must remind you of one inarguable fact. Only
20 by comparing all available options can be the most,
21 can the most effective and efficient treatment
22 protocols for each and every condition of ill health
23 and disease be identified. To do less, is to cheat
24 the patient and to fail in your fiduciary
25 responsibility to the public.

1 Thank you.

2 MS. BARRETT: Kathleen Creason. Again, if you
3 wouldn't mind spelling your name.

4 MS. CREASON: Sure.

5 **KATHLEEN S. CREASON**

6 MS. CREASON: Thank you very much. My name is
7 Kathleen Creason, C-r-e-a-s-o-n. I'm Executive
8 Director of the Osteopathic Physicians & Surgeons of
9 California.

10 As I believe you know, osteopathic physicians are
11 fully licensed physicians in California. They receive
12 medical training equivalent to a medical doctor. They
13 also receive additional training in manual
14 manipulation. And these points are relevant because I
15 think all of this ties into workers' compensation.
16 There are a significant number of osteopathic
17 physicians who participate in the workers'
18 compensation program and, therefore, are very
19 interested in these regulations.

20 I have submitted written comments, but I would
21 like to highlight three points from them. The first
22 one is OPSC commends the Division of Workers'
23 Compensation for the proposal to establish a Medical
24 Evidence Advisory Committee, Section 9792.23(a)(2).
25 The information that was indicated in the explanation

1 had reasons for establishing each of the medical areas
2 that were designated in the various positions. And
3 the primary factor is that the ACOEM Guidelines in
4 these specific areas were either inadequate or
5 incomplete. And I'd like to emphasize that
6 osteopathic manipulative treatment would fall under
7 that same category and, therefore, would like to
8 encourage the Division of Workers' Compensation to
9 include an osteopathic physician on that committee.

10 Second point I'd like to bring up is the issue of
11 evidence-based medicine, and OPSC reiterates the
12 points that were brought up by the California Medical
13 Association. We're very pleased to see the categories
14 A, B and C included, but emphasize very strongly that
15 we feel that category D should be considered as well.
16 It is -- There are a variety of areas that could never
17 be qualified or quantified under criteria that falls
18 under A, B or C, so, therefore, we encourage the
19 Division to consider implementation or consideration
20 of category D as well.

21 And, finally, a point that our organization has
22 brought up before, but I believe that it bears
23 repeating, is that frequently in the discussions the
24 issue of injuries not included or not discussed by
25 ACOEM has been addressed, but the issue of treatment

1 not addressed by ACOEM has not been addressed, and I
2 feel that that is a very crucial aspect, because there
3 may be an injury that's addressed, but not all of the
4 treatment modalities have been considered.

5 Thank you for your consideration.

6 MS. BARRETT: Thank you very much.

7 Okay. Steven Schumann. Margaret Gokey.

8 **MARGARET GOKEY**

9 MS. GOKEY: Margaret Gokey, G-o-k-e-y. I am an
10 occupational therapist, in private practice in
11 California for 23 years. I'm also committee chair for
12 the third-party reimbursement for Occupational Therapy
13 Association of California. There are about 9,200
14 occupational therapists and occupational therapy aides
15 in California.

16 And I also just want to concur from our first
17 speaker, Marry Foto, and so I really don't want to
18 take up a lot of your time today, but I've submitted
19 written comments, and there are just two things that
20 I'd like to highlight today.

21 Under the Medical Treatment Utilization Schedule,
22 my own personal experience has been that the delay of
23 treatment under the ACOEM Guidelines has affected
24 patients and their outcome. And, unfortunately, we've
25 had situations where we've had to wait 30 days for

1 authorization, and that's precious time when someone
2 is injured.

3 And the other area that I'd like to comment on is
4 the Medical Evidence Evaluation Advisory Committee.
5 And we feel very strongly that occupational therapy is
6 a unique field and contributes to the rehabilitation
7 of industrial injuries. And we really feel that it's
8 important to be able to have an occupational therapist
9 part of the treatment team.

10 Thank you for your time.

11 MS. BARRETT: Thank you very much. Richard
12 Bookwalter.

13 **RICHARD BOOKWALTER**

14 MR. BOOKWALTER: Hi. I'm Richard Bookwalter.
15 I'm an occupational therapist and I'm the President of
16 the Occupational Therapy Association of California.
17 And then Margaret said just basically everything that
18 we wanted to say, and Mary earlier, but I will give
19 you my card. And I want concur with their testimony.

20 Thank you.

21 MS. BARRETT: Thank you very much.

22 William Zhao. William Zhao.

23 UNIDENTIFIED SPEAKER: He spoke earlier.

24 MS. BARRETT: Z-h-a-o. I'll come back to him.

25 Jim Fischer. If you wouldn't mind saying and

1 spelling your name.

2 JIM FISCHER

3 MR. FISCHER: Sure. My name is Jim Fischer,
4 F-i-s-c-h-e-r. And I work for a company called Empi.

5 I am a chronic pain patient myself. I worked in
6 the emergency room at John Muir Medical Center in
7 Walnut Creek. Three years ago I slipped and fell
8 taking a gunshot victim to CAT scan, and I herniated
9 my L5-S1 on both sides, tore my left ACL, ended up in
10 the workers' comp system. And, you know, I'm going to
11 blow my anonymity. I'm in Alcoholics Anonymous. I
12 want to mention that because it's very important to
13 what I'm about to tell you.

14 I was given an array of medications and they
15 tried to treat me solely with narcotics, opiates.
16 And, frankly, after about 15 months my wife was not
17 very happy with me. I was restless, irritable and
18 discontent.

19 And I really, I notice that the pharmaceutical
20 companies are here today really knocking on the door,
21 coming down to the microphone complaining. I notice
22 that pharmaceutical companies are here today, they're
23 really complaining a lot about ACOEM. And what this
24 lady said right here is very important. Who's backing
25 ACOEM, who's investing? You know, Smith Kline,

1 Pfizer. We all know that we can trust the Smith
2 Klines, the Pfizers, the Mercks of the world. That's
3 all relative to the Cox-2 inhibitor fiasco this past
4 year where the, it was proven that there were people
5 on FDA that were actually paid by the pharmaceutical
6 companies. So we can't really trust the studies, or
7 even everything that we read in JAMA.

8 I want to welcome everybody that's come down here
9 and spoke. The OTs and PTs, they are definitely
10 suffering, the durable medical representatives here,
11 as well as the family practice physicians.

12 It's been my experience that after 15 months of a
13 lot of medications, that it was a simple TENS unit
14 that's worth about \$300 that allowed me to return to
15 work. I went to physical therapy; it helped. But
16 people didn't order a TENS unit for me because, you
17 know, they felt like it wasn't going to be authorized
18 through workers' comp.

19 I happened to go to work for the company and used
20 myself as a guinea pig, and it worked, and I drive
21 over 200 miles a day today. I have a territory from
22 Brentwood to San Francisco to Oregon, and I drive a
23 little PT Cruiser. And it's because of that TENS unit
24 that I'm able to work today. I wish I'd got that TENS
25 unit some time after my microdiskectomy and before all

1 the drugs that were introduced and my doctors telling
2 me it's okay, it's okay. You know, I was on -- when I
3 finished and decided to make the choice to go back to
4 work, I was on Lortab, which is like Vicodin, I was on
5 Ambien to help me sleep at night, Elavil for nerve
6 pain, Celebrex and Lexapro, not to mention all the
7 other drugs I was on before that.

8 So what's frustrating for me is that I'm carrying
9 a message to pain patients in doctors' offices,
10 physical therapy clinics, and they're being denied a
11 simple TENS unit or a muscle stimulator that will help
12 them. They're being denied a traction device that
13 works correctly. Instead, they're authorizing an
14 over-the-door traction device that's a bag full of
15 water. It comes with a free goldfish, by the way.

16 My point is, you know, I think that we cater to
17 the pharmaceutical companies, we cater to who has the
18 money and, you know, we're not practicing the best
19 medicine possible right now in the State of
20 California.

21 Thank you.

22 MS. BARRETT: Okay. We have about ten minutes.
23 I'll call one more person and then we've got -- How
24 about we take the next person and see how it goes.
25 Stephen Kessler with Berkeley Labor and Community

1 Coalition.

2 STEPHEN KESSLER

3 MR. KESSLER: Good morning. Sorry. Good
4 afternoon. I should say that I'm speaking on my own
5 behalf and I'm actually going to give you a narrative
6 of my experience, how it --

7 MS. BARRETT: I'm sorry, before you go any
8 further, your name is Stephen Kessler?

9 MR. KESSLER: Yes. S-t-e-p --

10 MS. BARRETT: K-e-s-s-l-e-r?

11 MR. KESSLER: Correct. Stephen with a p-h.

12 MS. BARRETT: Okay.

13 MR. KESSLER: Anyway, I had the opportunity to
14 speak in this room a couple months ago when the
15 Commission was having hearings, and I spoke from the
16 vantage point of having worked with people who are
17 homeless and, specifically, talked about a study that
18 I did in graduate school, case study, where I
19 established a number of people who became homeless
20 because of occupational injuries.

21 Relative to today's considerations, I think it
22 should be noted, perhaps it's obvious, but let me, at
23 the risk, say it anyway, most homeless people do not
24 over consume medical benefits or anything else. And
25 if you look at the survey and certain of the research

1 relative to the RAND study and other studies, they
2 don't have researchers going to homeless shelters, to
3 day labor centers or community clinics where people
4 are disproportionately underserved. So I think that
5 tends to skew the numbers.

6 I'm glad that I'm able to address the Commission
7 today. My comments are those of an injured worker
8 experiencing long-term chronic disabilities. Briefly,
9 my injuries date back to July of 1987, and I had a
10 stipulated agreement in 1992 with SCIF, the State
11 Compensation Insurance Fund.

12 Like many other workers who thought they had
13 medical treatment guaranteed by virtue of what was a
14 legally binding contract, I was disabused of that
15 notion at the end of '94 when I was first refused
16 medical care and continued to be so denied. So much
17 for the viability of the contract.

18 I was denied both physical therapy and a gym
19 membership, as well as subsequent x-rays and MRIs, the
20 latter being the appropriate diagnostic tools my
21 doctors believed had helped to fairly determine the
22 medical necessity for the above therapies and assess
23 how much my body has deteriorated over time. I just
24 got a rude awakening about that deterioration, which
25 I'll go over later. I was also denied all prescribed

1 medications, had to appeal through the utilization
2 review of the carrier. Eventually I got the
3 medications. And it should be noted that the
4 insurance company's own doctor had recommended annual
5 sessions of physical therapy, a gym membership and
6 medication.

7 When I said that I was glad that I was able to
8 address the Commission today, I should qualify that
9 statement. I'm furious that I have to be here, but
10 given the events of early last month, I'm glad that
11 I'm here and alive. I had to be taken to the
12 emergency room with what turned out to be a bleeding
13 ulcer. Up until that point, I didn't know that I had
14 an ulcer, let alone one that was bleeding. The
15 doctors concluded that Ibuprofen was not an
16 appropriate substitute for the relief of pain that
17 rigorous physical therapy and regular gym memberships
18 would have provided and would provide.

19 I'll never forget the look on my daughter's face
20 when she saw me looking like hell with a tube up my
21 nose and down my throat and my stomach to help get rid
22 of the pint and a half of blood that had collected
23 there. I choose not to be reminded of the hospital's
24 inquiry as to my willingness to be an organ donor, as
25 the event suggested. There was a bit of a concern

1 there. Doctors are clear that the medication caused
2 the bleeding. I don't want to take, have to take
3 medications, and if I do, the bare minimum necessary.
4 By the way, I was also, had been previously been given
5 Vioxx and Celebrex, which are no longer advised.

6 The monies wasted on utilization review could
7 have been paid for much of my therapy and wouldn't
8 have to be spent reimbursing the hospital for my stay
9 in the ER and subsequent admission as a patient. I'm
10 determined that at minimum, State Compensation
11 Insurance Fund will be reimbursing the hospital,
12 specifically, Alameda County Medical Center, otherwise
13 known as Highland, and not allow SCIF to off load or
14 externalize their costs onto us, the taxpaying public.
15 This is a compensable injury, I've been informed.

16 These unnecessary costs that threatened my life
17 and caused so much grief for my family are also bad
18 public policy. The State of California can do better
19 and, specifically, the Division of Workers'
20 Compensation.

21 Let me go on. An exclusive state fund is in part
22 something that should be considered, at least looked
23 at in consideration of the reliance on the mix of
24 State Compensation Insurance Fund with the private
25 carriers. And, unfortunately, SCIF acts like a

1 private carrier. An exclusive state fund wouldn't be
2 the predatory, act like a predatory company, as my
3 experience has been. I will be, along with the
4 statement, giving you an article by the late Bruce
5 Poyer, who wrote on the topic --

6 MS. BARRETT: Sir, if you wouldn't mind --

7 MR. KESSLER: Wrapping it up?

8 MS. BARRETT: No, not necessarily. But limiting
9 it to the regulations.

10 MR. KESSLER: Okay. I'm getting -- I'll get --
11 Yes, I will return to ACOEM Guidelines, as in terms of
12 my case. Relative to the points of the ACOEM
13 Guidelines, I was, got a copy of the letter that was
14 sent to the doctor, the qualified medical examiner who
15 I saw a couple weeks ago, and in this letter they
16 mentioned, among other things, that I'd had knee
17 surgery, when I didn't have knee surgery. They
18 mentioned that it included a medical report, and I
19 didn't see, receive the medical report. They
20 mentioned, or didn't mention non-medical reports which
21 I didn't get, and, of course, have asked for. That
22 would include an investigator's report for a car
23 accident that I had on the way to the physical
24 therapist when my doctor finally decided I could
25 benefit from physical therapy. And I should note

1 relative to the acute nature of the guidelines, I
2 wasn't even going to start physical therapy until 90
3 days after my accident.

4 Also, there was no mention in the letter to the
5 doctor what the nature of the dispute was. So in one
6 paragraph they did quite a bit, or didn't do quite a
7 bit, as it were.

8 Finally, let me conclude that like a significant
9 number of workers faced with a denial of necessary
10 medical care, my quality of life has been seriously
11 compromised. Like others, I'm faced with pain and
12 discomfort that disrupts my sleep, makes me function
13 at less than optimal levels, undermines my ability to
14 gainfully support myself and my family, and limits my
15 capacity to be productive as a worker and as an
16 engaged citizen. My experience and thousands of
17 workers will reveal the inadequacy of the ACOEM
18 Guidelines as they pertain to chronic conditions of
19 ill health.

20 I might add on my way home last night, walking on
21 the streets of Berkeley downtown, there are a number
22 of people on the streets, living on the streets, who
23 are in very bad shape. They're not over consuming
24 health care, believe me.

25 Let me mention a couple of points to conclude.

1 I've been informed that the guidelines of ASIPP, the
2 American Society of Interventional Pain Physicians,
3 are more appropriate for chronic long-term injuries
4 than the short term 60 to 90 days range of the ACOEM
5 Guidelines, as other people have discussed at length.
6 My experience with occupationally injured workers, I
7 mentioned, I think, sufficiently, and I will, based
8 upon the discussion today, I think I would do well to
9 give you copies of the letter that was sent to my
10 doctor and the response that I gave them.

11 Thank you.

12 MS. BARRETT: Okay. About half a minute. Thank
13 you very much.

14 Okay. We'll be back. We're stopping at this
15 point and we'll be back at 1:15 p.m. Thank you very
16 much.

17 (LUNCH BREAK)

18 DR. SEARCY: All right. I think we're going to
19 go ahead and get started, and I think we'll probably
20 be joined by a few more people, but I know a lot of
21 you have come from some distance so we want to respect
22 that and get started. So we're going back on the
23 record, and Stephanie will call the next person up.
24 She also has a couple of comments, but I just want to
25 make one, and that is that several people have asked

1 if we will -- if they will get a chance to speak, and
2 we will stay until everybody has had their chance.
3 So, there is no time limit as far as we're concerned.
4 We're not going to close it at 3:00 or whatever.
5 However long it takes to hear everybody we plan to
6 stay.

7 MS. BARRETT: Okay. And just a couple of remarks
8 before I call the next name. The applause between
9 speakers, if you could refrain from doing that, it
10 will be appreciated, and anybody who has a cell phone
11 if you would just check to make sure that it's
12 actually off or on the vibrate mode that would be a
13 good idea. As much as you -- the comments you might
14 want to make while someone else is speaking, please
15 refrain from that. Anything you want to put in
16 writing, you're welcome to do and it will be accepted
17 before the end of the hearing today.

18 Okay. Steve Schumann.

19 **STEVEN SCHUMANN, M.D.**

20 MR. SCHUMANN: Good afternoon. Thank you for
21 your time. My name is Steven Schumann. I'm here
22 today on behalf of two organizations. American
23 College of Occupational and Environmental Medicine,
24 ACOEM. Of course the recognized author of the ACOEM
25 Guidelines. As well as the -- its regional, western

1 regional component, Western Occupational and
2 Environmental Medical Association. We appreciate the
3 opportunity to comment. We appreciate the Division's
4 efforts to implement the work comp reforms of
5 2003/2004. The California reforms demonstrate that
6 the use of evidence-based guidelines can help workers
7 receive appropriate care in a timely and
8 cost-effective manner.

9 Briefly, we want to mention several ways that
10 ACOEM is making its Practice Guidelines more easily
11 and effectively used. Number one, ACOEM publishes
12 "APG Insights", a newsletter that offers supplemental
13 material to the guidelines. It includes updates from
14 medical literature, current analyses, and further
15 explanations designed to help users understand the
16 guidelines and better use them in their practices.

17 Number 2, ACOEM has also developed a Utilization
18 Management Knowledgebase (UMK). This easy-to-use
19 electronic tool helps providers, case-managers, and
20 reviewers make appropriate care management decisions
21 communicating clearly about the Guidelines.

22 Number 3, ACOEM is also moving forward with a
23 regular and predictable updating process that includes
24 review of new therapies and literature and expansion
25 on the guidelines where appropriate. This will be a

1 progressive refinement of the Second Edition, with a
2 rolling set of guideline updates to be issued over a
3 three-year period. The first updates will be
4 published later this year or in early 2007 and will
5 address the elbow and the spine.

6 The updating process is the work of two bodies.
7 ACOEM's Evidence-Based Practice Committee, with its
8 sub -- body-part subpanels acquires and evaluates
9 evidence, brings forth recommendations to update the
10 guidelines. This group includes more than 50
11 physicians from appropriate specialty areas, as well
12 as other health care professionals.

13 A second committee composed of four ACOEM members
14 and three members from other major national specialty
15 associations is charged with watchdogging the
16 evidence-based methodology and ensuring a
17 collaborative effort among specialties, and that all
18 topical reviews adhere to the fundamental
19 evidence-based principles.

20 ACOEM has listened carefully to comments raised by
21 various stakeholders in California, and we are
22 committed to addressing the issues in our update
23 process.

24 We invite input from those who have concerns that
25 the recommendations found in the Second Edition are

1 incorrect or not in keeping with the conclusions of
2 current, high-grade medical literature. Please send
3 us your comments along with citations, and we'll
4 certainly evaluate those.

5 The other comment I would make, as an aside here,
6 is I think a number of the issues that are raised, I
7 think one needs to distinguish between the content of
8 the guidelines and the implementation of the
9 guidelines, and I think we all recognize that there
10 have been some challenges in both areas, but ACOEM is
11 committed to currency of the guidelines, having those
12 be effective in the workplace, and there are many of
13 us in practice who see patients on a daily basis using
14 the ACOEM Guidelines, find them to be effective. We
15 think that many of our patients appreciate what we do.
16 The eight hours I spent in the clinic yesterday with
17 my patients, I think most folks would feel they're
18 getting good quality care, and we attempt to use the
19 guidelines as we practice medicine on a daily basis.

20 In addition, WOEMA, ACOEM's regional component
21 society, would like to recommend two additional seats
22 be designated on the Treatment Guidelines Advisory
23 Committee. These actually have already been mentioned
24 but I'll repeat to say that one seat would be occupied
25 by an expert on clinical research of no particular

1 affiliation, who would help guide the committee's
2 discussions regarding evidence hierarchies, research
3 reports, and the relative scientific merit of various
4 sets of guidelines.

5 A second seat would be occupied we request by a
6 family physician. Family practitioners serve as
7 treating, primary treating physicians and assist in a
8 greater number than perhaps any other specialty. We
9 believe that their input would be valuable as well.

10 Thank you for this listening to my comments.

11 MS. BARRETT: Thank you very much. L-i-u, Liu.
12 I think the name is R-u-i, Q-u-i-o-n-g, Liu. In
13 Oakland, from Oakland. Okay.

14 Deborah Hutchings. Is Deborah Hutchings here?

15 UNIDENTIFIED SPEAKER: Is it Harris?

16 MS. BARRETT: It's H-u-t-c-h-i-n-g-s, Deborah.
17 In Antioch.

18 Robert Weinmann.

19 **ROBERT L. WEINMANN, M.D.**

20 MS. BARRETT: Be sure to say and spell your name.
21 Thank you very much.

22 MR. WEINMANN: My name is Robert L. Weinmann,
23 M.D. I'm a physician neurology, and I'm President of
24 the Union of American Physicians and Dentists, which
25 is a local of the American Federation of State,

1 County, and Municipal Employees ALF/CIO, one point
2 four million members.

3 I have a presentation. I'll skip through it
4 because many points have been made. The ACOEM
5 Guidelines in my opinion should not be adopted. They
6 should not be used at least any further than they're
7 being used now. Because the concept in law that they
8 are presumptively correct is actually incorrect in
9 medicine and science. As a physician some things are
10 right about the ACOEM Guidelines, many things. Many
11 things are also wrong. But by law all of it is
12 correct.

13 We should probably have the ACOEM Guidelines
14 rescinded all together. We should also try to
15 reconstrue them so that they make more sense and come
16 -- can come closer to being deserving of being called
17 presumptively correct. I testified on SB899 right
18 after Senator Poochigian, and one of the items that I
19 remember about Senator Poochigian when pain was
20 discussed, was he said how does anyone know -- how
21 does a doctor judge that a patient is in pain. He
22 said the doctor examines the patient, maybe he
23 palpates something or other, and the patient winces
24 with ostensible pain. The word he used was winces.
25 He said that's how a doctor knows somebody is in pain,

1 and everybody laughed because everybody knows wincing
2 doesn't necessarily mean pain. Wincing can be fakery;
3 wincing can be anything; wincing can be anything but
4 what it really is, namely an expression of pain. When
5 I saw the legislators listening to that dribble, I
6 understood that we were really up against something.
7 Now Senator Poochigian is a decent man. He's a good
8 guy, and I have attended a fundraiser or two of his.
9 All the same he was dead wrong in his dismissal of
10 patient's pain, and the ACOEM Guidelines with
11 reference to anything chronic and especially chronic
12 pain are either incomplete or dead wrong.

13 In Labor Code 4610 we are told that the
14 utilization review doctor should have knowledge of the
15 subject about which he is providing utilization
16 review. That he should be up-to-date in the state of
17 the art of the treatment modality that is being
18 requested. Unfortunately, I have seen on more than
19 one occasion a remark like this by a utilization
20 reviewer. Although I am of the same specialty as such
21 as such doctor, I have never used this particular
22 modality of treatment, do not know anybody who does,
23 and have no familiarity with it. Therefore, it is
24 rejected as incompatible with the ACOEM Guidelines.
25 Actually, it's a statement that is incompatible with

1 Labor Code 4610, the appropriate section. Because the
2 doctor who did the utilization review was required by
3 that Labor Code to be up-to-date and to know what he
4 was talking about, but he doesn't have to, and the
5 insurance company likes it just fine when he rejects
6 the treatment anyway.

7 In one case that I was personally associated with
8 I recommended a type of treatment and it was reviewed
9 by a doctor with a Connecticut license but no
10 California license, and although he expressed a lack
11 of familiarity with the treatment that I wanted to do,
12 he nonetheless recommended its rejection but not
13 directly to me, not directly to the patient. No, sir.
14 The rejection notice went to a Dallas, Texas,
15 utilization review company, thence to me. So, here we
16 have a California doctor examines a patient,
17 interviews a patient, the records are sent to a doctor
18 in Connecticut without a California license, who
19 determines that the treatment shouldn't be done or
20 isn't necessary, who then tells a utilization review
21 company in Dallas, Texas, that that is his opinion,
22 and the Dallas, Texas, company communicates that and
23 the patient is denied. Of course, in my practice and
24 given my personality I just love it. I submitted it
25 for expedited hearing, recommended that that be done,

1 and basically I find out that with most of the
2 utilization reviews that seem unfounded, expedited
3 hearing is the next step. The lawyers don't
4 necessarily like that. It takes a lot of time on both
5 sides, but it usually works. You also know and have
6 heard that doctors according to the Labor Code are
7 supposed to be licensed in California if they are
8 going to influence care, and the way it's written in
9 the Labor Code, it says that the doctors who may
10 modify treatment, delay treatment, deny treatment,
11 even approve it are supposed to be licensed in
12 California.

13 MS. BARRETT: Doctor Weinmann, could you stay
14 within the proposed regulations please.

15 MR. WEINMANN: Okay. That point having been made
16 I can just skip it. I have submitted to you a letter
17 from Barry Eisenberg from the American College of
18 Occupational Medicine, and it expresses his opinion to
19 Senator Barry -- to Senator Alarcon that the ACOE and
20 utilization guidelines are being used incorrectly.
21 Anybody who wants a copy of that letter in this room
22 can have it, because I have some extra copies. But it
23 is important that you notice that the executive of
24 ACOEM while thanking the Legislature for its
25 confidence in his organization at the same time points

1 out that his guidelines are being misused. That
2 should stop, and I believe you have the power to put a
3 stop to it. The other doctor who is with me today who
4 is the president elect of the Union of American
5 Physicians and Dentists Stewart Bussey, M.D.,J.D.,
6 told me that he used to do workers' comp, but as the
7 utilization review has become more and more
8 complicated, as the guidelines have become more and
9 more oppressive, he has found it best just not to do
10 workers' comp at all. On the other hand, he works in
11 this building in social security, and he finds that
12 what is happening is that more and more people are
13 trying to get reimbursed through social security
14 because they are being denied at the workers' comp
15 level. This is a type of cost shifting also. Not
16 exactly within your purview, but something about which
17 you should be concerned.

18 I think that these points are some of the points
19 that I need to make. I don't think I have to go
20 through the entire testimony.

21 I would point out in closing that the American
22 Federation of State, County, and Municipal Employees,
23 one point four million members, had a meeting in
24 Chicago last week, and thought that this issue of
25 utilization review by doctors without licenses in the

1 states in which their opinions are given, should be
2 stopped, and adopted a resolution with no out -- with
3 no negative votes, and I want you to think of that.
4 That means there was about five thousand delegates in
5 the room and no one objected. So, we now have a labor
6 union that has adopted as a nation-wide plank that it
7 is wrong to allow utilization review to be done by
8 doctors who do not have licenses to practice medicine
9 in that state.

10 MS. BARRETT: Doctor Weinmann, your time is
11 almost up.

12 MR. WEINMANN: Okay. As a private practitioner
13 my worry about that is, once I have prescribed
14 treatment that has been denied or delayed, I remain
15 the treating doctor subject to malpractice. The
16 doctor in Connecticut has a free ride, and all he has
17 to say is no. Thank you.

18 MS. BARRETT: If you can refrain from the
19 clapping between, it will expedite the process.

20 Stewart Bussey. Dr._Bussey please.

21 MR. WEINMANN: Not here. I included his
22 comments.

23 MS. BARRETT: Okay. Thank you. Harry Purcell.

24 ////

25 ////

HARRY PURCELL

MR. PURCELL: Good afternoon. My name is Harry Purcell. H-a-r-r-y. P-u-r-c-e-l-l. I represent a company named Emsi, Electrostim Medical Services, Inc. We are based out of Tampa, Florida, but do business nationally including California. The reason I'm here today is to address specifically the ACOEM Guidelines and to reiterate the fact that, as many of those present here today have said, I think does not adequately address chronic pain or chronic care of pain. It defines chronic pain. It defines acute and sub-acute pain very well. I don't think that there are adequate guidelines to deal with chronic pain solutions. And many of the algorithms that are available for caregivers, again specifically deal with acute or sub-acute. I think if you were to go back over the record you would find that approximately 80 percent of the people here today have at some point mentioned the issue of chronic treatment for patients, and I think that's something that we need to address.

MS. BARRETT: Thank you.

MR. PURCELL: Thank you.

MS. BARRETT: Okay. Shahidal Marie Musawwir.

UNIDENTIFIED SPEAKER: She's not here.

MS. BARRETT: Not here. Would you let us know if

1 she comes back. Carl Brakensiek.

2 **CARLYLE R. BRAKENSIEK**

3 MR. BRAKENSIEK: Thank you and good afternoon.
4 It's been a long day. I'll try not to take a lot of
5 your time.

6 MS. BARRETT: Would you - I'm sorry. Would you
7 mind saying --

8 MR. BRAKENSIEK: Carlyle Brakensiek representing
9 the California Society of Industrial Medicine and
10 Surgery and California Society of Physical Medicine
11 and Rehabilitation, U.S. Healthworks, and VQ
12 OrthoCare.

13 To begin with, you have heard a lot of testimony
14 this morning, particularly from frustrated injured
15 workers, about how they have been denied care or
16 harassed or delayed in everything, and I can assure
17 you that was just not orchestrated testimony. I
18 represent over a thousand doctors, and I get calls
19 daily from physicians who convey the same message to
20 me; that they are having difficulty trying to get
21 necessary treatment to their patients because of the
22 delays, the denials, etc., that come as a result of
23 the misapplication of the ACOEM Guidelines. It's
24 seriously a problem. I admire your efforts. Frankly
25 I think the Legislature gave you an impossible task as

1 far as putting together a set of treatment guidelines
2 for long-term use. I recall a conversation I had with
3 one of the physicians who is deeply involved in the
4 preparation of the ACOEM Guidelines. Shortly after
5 they were published they held a meeting in Toronto. I
6 went to the meeting, talked with the physician, and I
7 asked him, I said, "How come your guidelines do not
8 apply to chronic injuries?" And he said, well, that's
9 true they don't apply to chronic injuries, and the
10 reason they don't is because we searched and looked
11 around and we couldn't find any scientifically-based,
12 evidence-based guidelines for chronic injuries that
13 was appropriate. So, that's why they were
14 intentionally designed to cover only acute and
15 sub-acute injuries. I think ACOEM has attempted to
16 revisit this issue recently, a little revision of
17 history, but at least for someone who is directly
18 involved in the promulgation of the Second Edition I
19 do not think there is any effort put in to apply to
20 chronic injuries.

21 It's also been brought out today that when RAND
22 reviewed various guidelines that are out there, they
23 -- I was at that meeting too down in Santa Monica in
24 which they refer to the ACOEM Guidelines as mediocre.
25 That's the word they used. These are mediocre

1 guidelines. And cutting to the chase, we're really
2 talking about what guidelines will have a presumption
3 of correctiveness. Because there are hundreds of
4 guidelines out there that can all be used for
5 utilization review purposes, but what we're really
6 talking about today is which guideline or guidelines
7 is going to have a presumption of correctness that
8 will basically, unless overcome, will trump other
9 guidelines that are being used.

10 There have been many witnesses: Mr. McFarren
11 from CAAA, COA/CMA. We've all expressed many, many
12 concerns about adopting the ACOEM Guidelines as being
13 presumptively correct. Under the statute, as you
14 know, your guidelines must be evidence based,
15 scientifically based, nationally recognized and peer
16 reviewed. In my opinion, the ACOEM Guidelines fail at
17 least two of those tests. They are not all
18 scientifically based, and they are not all peer
19 reviewed, and so I think frankly, as a matter of law,
20 you cannot adopt the ACOEM Guidelines across the board
21 as the A.D.'s guidelines because they fail to meet the
22 standard established by the Legislature. Now true, as
23 I said a minute ago, this is an impossible task for
24 you. I think the Legislature gave you this task, and
25 you cannot legally comply with it, and perhaps the

1 proper approach would be for the administration to
2 support puritive legislation so that, when you do
3 promulgate your guidelines, you will have something
4 that will comply with what the statute reads.

5 The Legislature adopted the ACOEM Guidelines as
6 interim guidelines. That frankly it was pig in a
7 poke. At the time they were adopted no one knew what
8 the ACOEM Guidelines were. They had not been
9 published as of the day that the Governor signed the
10 bill adopting them as interim guidelines, and you
11 can't go through this regulatory process and turn --
12 turn that sow's ear into a silk purse. It just will
13 not work. It is a -- ACOEM is abused now. We've
14 heard many stories about that, and certainly I would
15 urge you not to perpetuate the abuses by elevating
16 these guidelines to a presumption of correctness when
17 it is legally impossible.

18 Thank you.

19 MS. BARRETT: Thank you. Thank you for
20 refraining. Is Steve Cattolica here?

21 STEVE CATTOLICA

22 MR. CATTOLICA: Good Afternoon. My name is Steve
23 Cattolica. It's spelled C-a-t-t-o-l-i-c-a. And I
24 will say this, that you did much better than the first
25 time I tried. I want to thank you folks for the

1 opportunity to contribute. I represent the California
2 Society of Industrial Medicine and Surgery as Carl
3 does, the California Society of Physical Medicine and
4 Rehab and the U.S. HealthWorks. Our fundamental point
5 of view regarding the utilization schedule conforms in
6 large part with the findings of the RAND Institute and
7 provided to the Commission on Health and Safety in
8 Workers' Compensation. They found, of course, that
9 the -- they found fundamental flaws in every treatment
10 guideline including ACOEM. And, in fact, they found
11 no set of guidelines that, taken in their totality,
12 matched the Labor Code requirement of being evidence
13 based and scientific based. They also found that no
14 set of guidelines including ACOEM were comprehensive
15 enough; that is, addressed enough of the occupational
16 injuries so as to stand alone without requiring
17 additional guidelines by which to compare and do
18 proper utilization review. So, the Division in
19 adopting the ACOEM Guidelines alone at this time,
20 while expeditious, leaves wide gaps in the coverage of
21 common occupational injuries and illnesses. The
22 exclusion of consensus as a level of evidence leads
23 the Division to acknowledge that the fact that this
24 gap widens because virtually every guideline
25 available, including a number within ACOEM, are based

1 upon no better than D level or consensus evidence.
2 Examples of such gaps are in psychiatry, as well as
3 internal medicine in which ACOEM is completely silent.
4 Taking advantage of these obvious gaps carriers are
5 denying much treatment as not supported by ACOEM. Not
6 withstanding the proposed regulation against such
7 utilization review practices, we maintain that it
8 would be better to provide a well-respected and
9 comprehensive tool for the payers to work from than to
10 leave mental health or the treatment of internal
11 complaints to protracted deliberations that are sure
12 to be adverse -- adverse effect to the injured worker
13 as well as increased costs.

14 We've got a couple of suggestions specific to the
15 proposed regulations. The first is a structural
16 suggestion. Clearly from the RAND study and your own
17 deliberations or your own respect for the
18 contributions of the coming committee that will be
19 formed to use ACOEM throughout the article in such
20 specific ways will cause you folks to have to rewrite
21 the whole of the article each and every time a new
22 guideline is added. So, we suggest that 9792.21 be
23 shortened to become simply a list of those guidelines
24 that are comprising the schedule. That takes point 22
25 to pick up the slack of the rest of what is now point

1 21 and renumber the rest of the article. And you'll
2 see that in our written comments. We believe that
3 that will build in some flexibility for you folks
4 going forward under the presumption, of course, that
5 ACOEM, as we've maintained and you've heard before, is
6 not adequate in its entirety and more needs to be
7 done.

8 We have two main points to make with respect to
9 the actual level of evidence. The first is bestowing
10 presumption of correctness when guidelines are not
11 based on scientific evidence. Draw your attention to
12 9792.21(b). It's been quoted before, but our point is
13 that where it says in part it's supposed to help those
14 who make decisions regarding medical treatment of
15 injured workers understand what treatment has been
16 proven effective in providing the best medical
17 outcomes, we note that the consensus is not accepted
18 evidence, and guidelines based on consensus therefore
19 cannot be proof, and we do not -- they do not deserve
20 a presumption of correctness. We suggested to replace
21 the word proof with "found" or perhaps ACOEM's own
22 words "most likely." In recognition of this
23 conclusion, plus the fact that ACOEM Guidelines
24 recommendations are in many cases actually consensus
25 based, and thus should be disallowed by Labor Code

1 4604.5(b) or excluded by the very definition of
2 evidence found within the article.

3 In each applicable chapter of the ACOEM
4 Guidelines there's a table that provides recommended
5 optional and not recommended clinical measures. Of
6 the recommended clinical measures in all those tables
7 there are included 43 percent based solely on D level
8 evidence. In our written comments there are exhibits
9 that compile that data and also provide the source of
10 that data. As the Division is aware, D level evidence
11 is defined by ACOEM as panel interpretation or
12 consensus of evidence not meeting including criteria
13 for research-based evidence. Chapter 13, which is the
14 knee section, knee complaints, provide an example. I
15 won't go through the details of that table that I've
16 just handed to you, but again it's the table of
17 recommendations optional and not recommended clinical
18 measures from the chapter on knee complaints. It's
19 ironic, we believe, to find that 43.7 percent of the
20 recommended clinical measures throughout the ACOEM
21 Guidelines are based not on hard evidence, not
22 scientific evidence, but on the panel's consensus. We
23 believe that irony is compounded by the fact that
24 approximately 61 percent of the clinical measures
25 considered not recommended by ACOEM are also based on

1 D level evidence. Thus, we find that since consensus
2 is necessary at both ends of the recommendation
3 spectrum, there's no factual basis for a presumption
4 of correctness in either case. Placing a presumption
5 of correctness upon consensus guidelines renders both
6 the schedule and the utilization review process
7 confusing, ambiguous, and contrary to law.

8 The Division within its Medical Treatment
9 Schedule proposes to adopt guidelines in which 48.7
10 percent of the clinical measures considered are
11 disallowed by the enabling statute. We also recognize
12 that in adopting the criteria for future guideline
13 consideration that without radical and complete
14 updating from ACOEM the ACOEM Guidelines themselves
15 would be disqualified in much of its entirety.

16 Now our comments are not meant to denigrate ACOEM
17 or the Division's work. As Carl said you've got a
18 herculean task that may in fact be impossible to
19 accomplish, but rather we want to simply point out the
20 conflict between proposed medical treatment schedule
21 and a presumption of correctness. Thus, we recommend
22 that in no case should a presumption of correctness be
23 in effect for any recommended clinical measure or any
24 treatment guideline or treatment modality whose
25 efficacy or lack of efficacy is based upon D level or

1 consensus evidence.

2 Our second point addresses the application of any
3 guideline outside of its original intent, specifically
4 9792.22(a), wherein you allow the ACOEM Guidelines to
5 be available to evaluate acute and chronic medical
6 conditions. It's been stated before, but I want to
7 draw your attention once more to the point in Chapter
8 12 under low back complaints on page 287 where in fact
9 those low back recommendations are specifically aimed
10 at conditions less than three months of duration. The
11 statement is succinct and unequivocal. It clearly
12 means that all the ACOEM Guideline recommendations for
13 treatment of low back complaints are applicable to
14 symptoms of no less than three months. There's no
15 other interpretation possible.

16 We understand that there are newsletters and
17 publications that have been developed since the
18 original publication of the second edition that
19 attempt to bridge the original intent and make them
20 available to chronic injuries, but we would suggest
21 that those separate documents, if they were to be
22 incorporated into the schedule through these
23 regulations, because they, those advisories themselves
24 are not scientific based, they could not be
25 considered.

1 So, we're left with two suggestions. The first
2 is that the presumption of correctness should not
3 exist unless a specific medical treatment guideline is
4 directly applicable to the injured worker's injury and
5 condition. Second, that the presumption of
6 correctness does not exist for any medical treatment
7 guideline or specific recommended clinical measure
8 that's based on evidence other than the three levels
9 of evidence defined in this section, meaning the
10 article that you're considering.

11 MS. BARRETT: You have about half a minute left.

12 MR. CATTOLICA: I'm sorry?

13 MS. BARRETT: You have about half a minute left.

14 MR. CATTOLICA: That's good.

15 Barry Eisenberg in his letter to Senator Alarcon
16 made a comment with respect to the applicability. He
17 said, and I quote, that "when a physician's request
18 does not meet guidelines, it does not automatically
19 mean that the request is inappropriate." So, in
20 effect, Mr. Eisenberg was making no presumption of
21 correctness with respect to the guidelines and their
22 application to chronic injuries. And the corollary to
23 Mr._Eisenberg's last statement is also true that,
24 notwithstanding the Chatham decision, which is on
25 appeal, when an ongoing course of treatment, such as

1 for a chronic condition, is compared to the guidelines
2 and found not to meet them, it cannot automatically
3 mean that the treatment is inappropriate.

4 This treatment schedule is chronically late.
5 Adopting ACOEM Guidelines alone is problematic at
6 best. We applaud the formation of an adequately
7 staffed advisory committee, but the group will take
8 months to take effect, to be of effect. Based on the
9 proposed guidelines, injured workers and their
10 physicians will continue to be held hostage to
11 guidelines that are clearly inadequate for the
12 totality of the job. The Division can quickly remedy
13 this situation by denying the presumption of
14 correctness to consensus guidelines applied
15 prospectively or retrospectively, or applied to
16 conditions acute or chronic to which they were not
17 originally intended. By doing so, you'll engender a
18 timely dialogue between professionals in order to
19 determine the best treatment available.

20 Thank you very much.

21 MS. BARRETT: Thank you very much. Did Liu come
22 back, L-i-u? Is Deborah Hutchins here? Okay.
23 Kristine Shultz.

24 Would you mind saying and spelling your name,
25 please?

KRISTINE SHULTZ

MS. SHULTZ: Sure. Kristine Shultz, representing the California Chiropractic Association, and it's K-r-i-s-t-i-n-e, S-h-u-l-t-z. Thank you for the opportunity to talk today about the proposed regulations before us.

The first point I want to make is the CCA is opposed to the adoption of these guidelines for the utilization scheduled for chiropractic care. We have some substantial concerns that were raised by the RAND study, and in your own Statement of Reasons the DWC acknowledged the fact that they're severely lacking when it comes to chiropractic care. It may not be valid and not comprehensive.

Our concern is that in the Statement of Reasons you mention that you can't do anything about it because there's no other guidelines that are apparently better. But we feel that you can do something. Adopt interim guidelines that would be appropriate for areas where the RAND study has identified that the ACOEM Guidelines are deficient. For those areas a trial of chiropractic care should be allowed in four to six visits. And if there's functional improvement, allow additional care. We think that this is a reasonable approach, an approach

1 that would get people the care they need, especially
2 considering there's already a 24-visit cap on
3 chiropractic care.

4 And the second point that we have is we recommend
5 an amendment that would require that the three members
6 of the advisory committee appointed at the discretion
7 of the Medical Director and the three additional
8 members who serve as content experts would not have
9 ties to the workers' compensation industry. We are
10 concerned that the purpose of the committee is to
11 evaluate guidelines and to look at the scientific
12 evidence and considerations of cost implications.
13 Really, this is not appropriate for this type of
14 review. We think that that should be forbidden
15 specifically in the regulations.

16 Thirdly, we understand, you know, California
17 Medical Association would like to see more physicians
18 on the committee, on the advisory committee, but we
19 have concerns about it being overly focused towards
20 allopathic medicine. Right now, if you look, eight of
21 the ten positions could be -- are eligible to be
22 allopathic doctors, medical doctors, and only two
23 would be complimentary alternative type providers.
24 The concern that we have is that the guidelines that
25 are reviewed in the, might be very tainted towards

1 that type of an approach. Medical doctors don't have
2 training in chiropractor care. They don't have, many
3 of them don't have experience with it. And that was
4 shown in the RAND report where there was a lot of
5 conflict about what is good practice of medicine. And
6 in those areas of consensus where this looks like this
7 committee will be focused, it's important to have a, a
8 very fair perspective on these types of therapies. We
9 think to solve this problem, have the three additional
10 members be actually public members instead of medical
11 doctors. And also, of course, not tied to the
12 industry in any way.

13 Lastly, the final issue that we had identified is
14 that although randomized control studies are
15 designated the highest level of evidence, we think
16 that the meta-analyses of randomized control studies
17 should be the highest level of evidence. And the
18 reason why is because benefit analysis is a review of
19 those randomized control studies that, that take it
20 through a process of throwing out the studies that
21 aren't appropriate and aren't scientifically rigid.
22 So we think it's important that those be really the
23 highest level of evidence and be given the greatest
24 weight.

25 Thank you so much for the opportunity to testify

1 today and questions. Thank you.

2 MS. BARRETT: Thank you. Rona Ma?

3 Please say and spell your name.

4 RONA MA

5 MS. MA: My name is Rona, R-o-n-a, last name is
6 M-a, Ma.

7 Thank you very much for give me this opportunity
8 to stand here. I am the President of the United
9 California Practitioners of Chinese Medicine. That is
10 we have more than 400 licensed acupuncturists
11 practicing in the Bay Area. So I think we have 10,000
12 in California, right now.

13 You heard a lot about acupuncture have been
14 treated, you know, after the guideline. So I don't
15 want to repeat that. We have a lot of doctors over
16 there, also represent them, and also I have the
17 signatures here I will hand to you.

18 So I think probably I tell you one, you know,
19 from my own experience, let you know what we have been
20 treated. Before the reform, I have probably more than
21 50 injured worker that would be see each year, and the
22 95 percent has to be referred by a medical doctor.
23 After the reform last year, I only saw 11, and all the
24 11 has been denied. That mean I see zero patient
25 because of ACOEM Guideline. And this year I have so,

1 I got four referral from the medical doctor. The
2 reason is that it doesn't matter, the guideline will
3 be denied. So that is a waste their time, waste my
4 time and let the patient getting hurt. So this -- but
5 fortunately, the four this year I saw one patient
6 after I, you know, make the copy of the, you know, the
7 CAOMA publish the acupuncture evidence-based, the
8 guideline to them, so why it has been, so I see them
9 for six visits. And then some of them is the injured
10 worker I saw before, the flare-up. But there has been
11 denied, even though the work on them has been denied
12 because of guideline. And one of my patient is so
13 painful and she have no choice. She pays of her own
14 pocket to pay to see me.

15 See their, the pain, my heart is broken. So that
16 is I give the treatment for free. I can give one for
17 free, I can give ten for free, I cannot give fifty for
18 free, because the injured worker should be taken care
19 of by the work comp system.

20 So I'm standing here, you know, I just wanted --
21 the policy maker and you, you know, give the -- I
22 think I can see the door is shut, shut down because I
23 have 11, 11 denied. And I want, you know, give
24 acupuncture or other treatment available to all the
25 injured worker in California.

1 Thank you.

2 MS. BARRETT: All right. Again, if we could
3 refrain from the clapping, that would be beneficial.

4 Rosie Zamora. Rosie Zamora.

5 MS. ZAMORA: I'm trying to get my cane out.

6 MS. BARRETT: Okay. That's okay.

7 ROSIE ZAMORA

8 MS. ZAMORA: My name is Rosie Zamora,
9 Z-a-m-o-r-a. I'm here as a patient that has been
10 denied, and ACOEM has sent me a letter stating that I
11 was denied acupuncture treatments.

12 I had an accident August_10 of 2005, and I had
13 gone to the doctor that the company that I work for
14 sent me to. And the doctor -- they said, okay, we're
15 going to try all these treatments. And they gave me
16 cortisone shots and so forth. They have not worked.
17 They're very painful and they have not worked. The
18 doctor that they sent me to recommended acupuncture,
19 if I was willing.

20 You have to excuse me, I'm very -- I've been very
21 stressed recently from the job and so forth.

22 I went to the acupuncturist and I had the first
23 session of treatments, where after a year of shots and
24 all the other treatments nothing worked. Within one
25 session I was back to work. I was only off for six

1 weeks because I worked through the pain and going
2 through the treatments that they gave me. And now I'm
3 having problems at work with the, with my supervisor
4 and harassment.

5 Again, like I say, ACOEM has sent me a letter
6 denying my treatments. How they can do this, I don't
7 understand, because after one session of treatments I
8 had gone back to work, and I'm doing my job. And I
9 thank God that my, the primary doctor there asked me
10 if I was willing to do this, and I thank God again for
11 the person that's given me the treatments.

12 Like I say, the stress -- I was at the hospital
13 the other morning till 4 a.m. because of all this
14 going on. But I just want to say that the guidelines
15 need a little tweak, a little something else in there
16 stating --

17 (At this point Ms. Overpeck changed the tape in
18 the recorder.)

19 MS. ZAMORA: Yeah. They need to put in other
20 treatments, because, like I say, I had never been to
21 an acupuncturist. I had never had any of this. And
22 now I'm, I'm, I'm able to work. And, yet, that's
23 causing problems through the job system, you know.
24 Workman's comp, as far as, as I see, it's -- we're
25 just going around and round in circles. There needs

1 to be guidelines to provide for people like myself who
2 have had nothing but pain in the last year. And I, I
3 wrote myself notes, and I think they went around in
4 circles, too.

5 But I just wanted to say that if the guidelines
6 could be worked on, other things added, it would help
7 people like myself, would be good.

8 Thank you.

9 MS. BARRETT: Thank you very much.

10 Debra Harris.

11 **DEBRA HARRIS**

12 MS. HARRIS: Hi. My name is Debra Harris,
13 H-a-r-r-i-s.

14 I was injured in August of 1996, and my doctor
15 had to fight the insurance company to allow me to see
16 a surgeon. Finally in July of 1997, almost a year
17 later, I was able to see the surgeon, and because it
18 took so long, he had to fuse my cervical spine 2
19 through 7. I also have bilateral drop foot, bilateral
20 carpal tunnel. I have a syrinx in my thoracic spine
21 and disks out in my lumbar spine. I had severe
22 headaches daily which caused me to vomit daily, and I
23 have really bad nerve pain.

24 My doctor recommended acupuncture, and thank God
25 it has worked. But the doctor who makes the decision

1 for the insurance company said that it was only
2 helping with the pain and that he recommended that I
3 try aerobics instead.

4 My surgeon has been asking the insurance company
5 since last September if I could see a surgeon in San
6 Francisco to work on the syrx that I have because
7 it's been affecting my legs and I've been falling, but
8 the insurance company hasn't answered him at all. And
9 so in June I had to have brain surgery because I fell,
10 and I have a subdural hematoma, and thank God that's
11 been taken care of, too. But there again, the
12 insurance company doesn't want to have anything to do
13 with that.

14 I don't understand why the fact that I lost my
15 life as I knew it in 1996 isn't enough. I have MRIs,
16 x-rays, EMGs, surgeon reports, et cetera. Why am I
17 not going to have these taken care of for the rest of
18 my life? Why do I have to have life in torment from
19 ACOEM Guidelines, as well as constant pain?

20 I facilitate a chronic pain group, and members
21 who have had their case settled for years are having
22 problems obtaining care. I believe right now that
23 these ACOEM Guidelines and this whole system needs
24 help. And I do have time on my hands, so if you need
25 help, I'm available.

1 Thank you.

2 MS. BARRETT: Thank you. Richard Esquivel.

3 MR. ESQUIVEL: I prepared some statements just to
4 submit to all of you. Can I give them to you now or
5 after?

6 DR. SEARCY: No. It's fine.

7 MS. BARRETT: If you wouldn't mind saying and
8 spelling your name when you get back.

9 MS. ESQUIVEL: Sure. Okay. Please take one of
10 each. I'm going, I'm going over this one. This is
11 for your reference. I prepared two statements, two
12 different statements for each of you.

13 MS. BARRETT: Thank you.

14 MS. ESQUIVEL: Sure.

15 **RICHARD ESQUIVEL**

16 MR. ESQUIVEL: My name is Richard Esquivel,
17 that's spelled E-s-q-u-i-v-e-l. I'm a licensed
18 acupuncturist in San Jose. And I'm normally a very
19 calm and level-headed person, but today I'm, I'm
20 furious about many things. I've been contemplating
21 this while I've been listening to other people.

22 I think I'm most furious about how little has
23 been done in solving these problems, these issues
24 which have been identified a long, long time ago, over
25 two years ago. They were recognized by, by the A.D.'s

1 office, at public hearings, they were recognized by
2 RAND and CHSWC, Commission on Health and Safety and
3 Workers' Compensation. And RAND and CHSWC made
4 various recommendations and suggestions on what could
5 be done to solve some of these problems. And now,
6 almost two years later, after the date by which the
7 A.D.'s office was mandated to come up with the
8 utilization schedule, we're being told that the, the
9 A.D.'s office has decided to keep the ACOEM Guidelines
10 in place as is, and has decided to explicitly apply
11 them to all chronic conditions, as well as acute
12 conditions which they were a failure at addressing.

13 Am I speaking too loudly?

14 UNIDENTIFIED SPEAKER: You're too close.

15 MR. ESQUIVEL: Too close? Okay. I'm sorry.

16 The ACOEM Guidelines have, had been problematic
17 in addressing acute, subacute conditions, let alone
18 chronic conditions, which it has failed miserably at.

19 And I'm also furious at the reasons which I read
20 in your document for this decision. And I'm also
21 furious that it's taken this much time to come up
22 with, with basically nothing.

23 Let me tell you a little bit about my practice.
24 I have a private practice that I see injured workers
25 at in San Jose, but I also work at the Alliance for

1 Occupational Medicine facility in Santa Clara, where I
2 supply acupuncture services to the injured workers
3 there. It's, it's an occupational medicine facility
4 similar to U.S. HealthWorks, that is selected, chosen
5 by various employers and companies to serve as the
6 facility to provide treatment to their employees when
7 they get injured. So it's an employer-selected
8 physician facility. These companies entrust these
9 occupational medicine facilities to provide
10 appropriate care to their injured workers so that they
11 can get back to work. We face the same problems there
12 as I do in my private clinic in trying to get
13 authorization for treatment for these workers, some of
14 which you've heard from today.

15 I'm also the, one of the editors of the
16 Acupuncture and Electroacupuncture: Evidence-Based
17 Treatment Guidelines that you've heard about, and we
18 spent a lot of time, put a lot of work into the
19 development of the guidelines when we were requested
20 to do so by the A.D.'s office, and also we made sure
21 that we met all the criteria that RAND put forth when
22 they decided to solicit treatment guidelines on the
23 various specialties. We made sure we addressed every
24 criteria that, that they were using as the selection,
25 the selection criteria for the, that they used prior

1 to evaluating the guidelines. And, and now we're
2 being told that the specialty guidelines will not be
3 adopted, will not be part of the utilization treatment
4 schedule because, for the following reasons -- These
5 quotes come up numerous times in the, in the 50-page
6 document of the initial reasons of, initial reasons
7 of, for adopting the, the utilization schedule. No
8 mechanism has been identified for merging the
9 contradictory recommendations in the guidelines.
10 Conflicting recommendations will be confusing to the
11 provider, employer or claims administrator. And
12 adoption of other guidelines will affect the
13 presumption of correctness on the issue of extent and
14 scope of medical treatment of the ACOEM Guidelines.

15 Well, this was the task that the A.D.'s office
16 was charged with. I agree this was a very difficult
17 task, but -- it may be impossible, but to take two
18 years, almost two years after the deadline so that --
19 actually, the A.D.'s office had more than two years
20 because the deadline was probably six months after the
21 time that the legislation was passed, to come out now
22 and say that we're going to keep the ACOEM Guidelines
23 after knowing of all the problems that injured workers
24 have been having in the system. The injured workers
25 testified at the hearing at the end of 2004 at the

1 CHSWC hearing and the A.D.'s office hearing, it was a
2 different group of injured workers, but they were all
3 complaining about the same thing. And physicians. It
4 wasn't just the injured workers, and it's not just
5 injured workers today, it's physicians in the system
6 that are complaining about the system. So to read now
7 and to hear from the A.D.'s office that it's, no
8 mechanism has been identified for merging the
9 contradictory recommendations sounds to me like the
10 A.D.'s office is sending the public the following
11 message: It's too much trouble to address the
12 problems in the workers' compensation system. It's
13 too much trouble to address the weaknesses and
14 deficiencies of the ACOEM Guidelines and the
15 inappropriate application of the Guidelines. And,
16 essentially, it's too much trouble to develop the
17 utilization schedule that is fair, reasonable and of
18 service to injured workers. Instead, it appears that
19 the A.D.'s office has chosen to make life easier for
20 itself rather than the injured workers of California,
21 which it serves.

22 I don't even understand the reasoning that the
23 adoption of the other guidelines will affect the
24 presumption of correctness on the issue, extent and
25 scope of medical treatment of the ACOEM Guidelines.

1 That sounds to me like fuzzy logic, because the
2 utilization schedule was intended to replace the
3 temporary use application of the ACOEM Guidelines in
4 the regulation of treatment of injured workers.

5 MS. BARRETT: You have about half a minute left.

6 MR. ESQUIVEL: So either the -- How could the,
7 how could the legislative intent be to afford the
8 presumption of correctness of the ACOEM Guidelines
9 after the Medical Treatment Utilization Schedule is
10 adopted? Obviously, it wouldn't be reasonable, so --
11 since this would prevent the A.D.'s office from
12 adopting any treatment schedule that's not consistent
13 with ACOEM. So -- and that's, and that is the, is
14 the, seems to be the reason for the adoption of ACOEM
15 Guidelines, that everything else is inconsistent with
16 ACOEM, so we're going to stick with ACOEM. It just,
17 it doesn't make any sense.

18 I'd like to address a couple of other issues.

19 MS. BARRETT: Unfortunately, your time has run
20 out.

21 MR. ESQUIVEL: Can I have 30 more seconds?

22 DR. SEARCY: That's fine. And then we have your
23 written, so try and bring it to a closure, if you
24 would.

25 MR. ESQUIVEL: Okay. I'm going to address two

1 issues in 15 seconds.

2 One, the chronic conditions in ACOEM Guidelines,
3 chronic recommendations in ACOEM Guidelines. Most, as
4 most the people testified today, most of the
5 recommendations, Chapters 8 through 14, which address
6 treatment of all the body regions, is intended for
7 acute and subacute conditions only. The chapter that
8 does address chronic pain is in Chapter 6. And this
9 is what Chapter 6 says about chronic pain: Typically
10 the chronic pain patient cannot be treated by the
11 interventions that are appropriate for acute pain.
12 This is a direct quote on page 108. Research suggests
13 that multidisciplinary care is beneficial for most
14 persons with chronic pain and likely should be
15 considered the treatment of choice for persons who are
16 at risk for, or who have chronic pain and disability.

17 MS. BARRETT: Okay. Thank you very much. Your
18 time has run out.

19 MR. ESQUIVEL: Okay. Just ten more seconds. One
20 last thing. The -- because a couple people mentioned
21 this, I heard it from the chiropractor, physical
22 therapy. The idea of a prior authorization process
23 for modalities such as acupuncture, physical therapy,
24 chiropractic, a prior authorization process that would
25 allow for a short course of treatment, six treatments

1 for, for injured workers to see, to assess the
2 therapeutic benefit, that was raised by CHSWC, that
3 was raised by CHSWC.

4 MS. BARRETT: Is that in your document? Because
5 if it's not, what you might want to do is take --

6 MR. ESQUIVEL: I have a copy of that CHSWC
7 recommendation and I will leave it with you. I just
8 have one copy, because I'm not sure if it's in that.

9 MS. BARRETT: Okay. Thank you very much.

10 MR. ESQUIVEL: You're welcome. Thank you.

11 MS. BARRETT: Ling Yu Suel, S-u-e-l, or Sun,
12 S-u-n, Ling, Ling. No? Okay.

13 Carol Mitchell Writon. Is it W-r-i-t-o-n? Oh,
14 Writon, I'm sorry. It's Carol, Carol Mitchell.

15 **CAROL DENISE MITCHELL**

16 MS. MITCHELL: Carol Denise Mitchell. I would
17 like to give this to the lady, my latest book on
18 workers' rights. No charge.

19 MS. BARRETT: Would you mind saying and spelling
20 your name.

21 MS. MITCHELL: Yes. My name is Carol Denise
22 Mitchell, and I am the author of "Your Rights. What
23 Employers Do Not Want You To Know."

24 I'm also an injured worker which precipitated my
25 writing the book. What I would first like to do is

1 say thanks, Stephanie, Ann, Destie, and Minera.

2 MS. KROHN: Minerva.

3 MS. MITCHELL: Minerva. Okay. Thank you for
4 having me, and allowing us all a forum on which we
5 could speak. I would just like just to impart to you
6 how important we all are. You're important. We are
7 important as American workers, and these doctors, I
8 couldn't commend them enough for their technical
9 aspects of what's gone awry or what has gone wrong
10 with these regulatory new rules, whatever, and God
11 bless them for being here to -- to ask you not to
12 implement anything that's ambiguous in scope, even in
13 the most minute form.

14 Dealing with workers' comp was comparable to the
15 way I felt when I learned there was no Santa Claus. I
16 was really remissed as a young girl because you
17 believe as an American citizen in the things that
18 you're taught as a child. So, of course, that
19 transcends into your adult life when you're told
20 specifically by the human resource department that,
21 when you go into a job, you're going to be treated
22 fairly if you get hurt, and when you find out there's
23 no Santa Claus in the workers' compensation system,
24 it's very demoralizing.

25 I was hurt on the job in February, 2005, when a

1 large picture fell on my head, and I didn't want to
2 file a workers' comp case because I had filed one
3 before and I didn't want to go through that again.
4 So, what happened, I was very reluctant to do so, but
5 my symptoms made me report the injury. I was a
6 manager of a large property in Pittsburg, California,
7 and I said, "No way. You're not going to report this
8 injury", but then I met Katie Hurt with John Muir
9 Hospital, and she said I don't care, if you were on
10 the job for two hours, you're going to report this
11 injury. I said, "Please don't let me. I don't want
12 to go back to the workers' comp system and deal with
13 State Comp or any of the insurance funds." And she
14 said, "Well, would you like to be an invalid for the
15 rest of your life and not have any recourse?" It's
16 better to have a minute form of recourse and go
17 through these utilization review boards.

18 They all have a presumptive notion that we're all
19 out to cheat the system, and that is so wrong. I
20 don't think this woman in this wheelchair is out to
21 cheat a system, nor was that woman that had brain
22 surgery, nor was I, and I'm going to tell you the
23 bitter consequences of what happened to me.

24 I was very reluctant to file a workers' comp case
25 and, when I took my EEG, the lady that took the EEG

1 said I was an injured worker but I wouldn't dare file
2 a case because I don't want to deal with the insurance
3 company and the review boards. So, she said I worked
4 through my injury. She said, "Don't you want to work
5 through yours?" And I said, "Yes."

6 MS. BARRETT: Do you have any comments you would
7 like to make about the proposed regulations?

8 MS. MITCHELL: Yes, I would. What happened was
9 medical treatment for pain, when a person tells you
10 they're in pain, they really are in pain. And what
11 happened was my head injury rendered that not only was
12 I in pain but I was dying. What they found is, my
13 doctor called me up. The workers' comp -- first of
14 all, the workers' comp insurance company sent me to
15 the wrong doctor for my head injury. They sent me to
16 Dr._Sorenson for a head injury, and the man is a hand
17 doctor. He's not a neurologist, and he treated me so
18 bad and he denied my injury. So, what happened was I
19 will call Becky Insinggo (phonetic) of State
20 Compensation Insurance Fund, and I will call her when
21 I knew I could get her attention at 3 o'clock in the
22 morning. I thought it was better to leave a concise
23 message and to call her when I had the pain so I could
24 give credibility to the pain rather than her not
25 answer the phone at all.

1 So, what happened was Dr._Wong called me and told
2 me, "Carol, we've decided that you need to come in
3 right away. There is a problem with you medically
4 that you need to know about." They found a 4 x 5
5 centimeter tumor on my throat. That had I not
6 reported the workers' compensation injury, I never
7 would have known that I was dying of laryngeal
8 schwannoma. Only a 113 cases of laryngeal schwannoma
9 have been reported. The utilization review board
10 denied my medication and then, when they finally
11 approved my medication, I found out that none of the
12 state or local hospitals could help me any more. My
13 case was being referred to U.C.S.F. I stand here
14 before you thankful for the persistence of me, and
15 wanting to find out what was wrong with me, and
16 Dr._Katie Hurt at John Muir Hospital that I now live
17 with a disease that cannot be excised from my neck.
18 It's a large tumor. I'm only one of maybe 213 cases
19 of laryngeal schwannoma, and that's why an employee's
20 injury must be taken very seriously.

21 So, while I was at home fighting the insurance
22 company I wrote this book called "Your Rights. "What
23 Employers Do Not Want You To Know" because I figured,
24 if I was going to die of some foreign illness, that I
25 could leave behind a legacy of truth. Maybe the last

1 iota of truth that employees can depend on.

2 Thank you.

3 MS. BARRETT: Thank you very much. Did Maria
4 Lozado appear?

5 UNIDENTIFIED SPEAKER: She's just sick. She's an
6 injured worker. She had to leave.

7 MS. BARRETT: Thank you.

8 UNIDENTIFIED SPEAKER: Like a lot of them.

9 MS. BARRETT: Thank you.

10 UNIDENTIFIED SPEAKER: Yeah. Thank you.

11 MS. BARRETT: Okay. Wei Wei. W-e-i, W-e-i.
12 Michelle Lau.

13 MS. LAU: Lau.

14 MS. BARRETT: Lau. Thank you.

15 **MICHELLE LAU**

16 MS. LAU: My name is Michelle Lau, licensed
17 acupuncturist over 20 years, and also I'm the
18 president of the Council of Acupuncture and Oriental
19 Medicine Associations.

20 MS. BARRETT: Do you spell your last name L-a-u?

21 MS. LAU: L-a-u.

22 MS. BARRETT: It's Michelle with two Ls?

23 MS. LAU: Yes, Michelle with two Ls. Thank you
24 for the opportunity to address our concern here.
25 Actually I will make it very short because our

1 representative Sandra has already addressed them, most
2 of the things we want to say. The reason I'm here
3 because the Council of Acupuncture and Oriental
4 Medicine Associations cover about 10 organization of
5 different ethnic group. I mean of profession in
6 southern California and northern California. Most of
7 them their representative they cannot come today.
8 Then I just address their concern that -- make it very
9 brief.

10 The acupuncture treatment to the injured worker
11 in worker comp systems already almost 20 years. So,
12 we have been benefit a lot of patient, the injured
13 worker, offer the opportunity back to work, but since
14 the past four years we have been working very closely
15 with the DWC, RAND Corporation, and the Legislature,
16 and then we try to see what we can work with the
17 system to improve after the ACOEM Guideline was
18 adopted as the Chairman Guideline. So, in the past
19 two years that we already see that nothing has been
20 changed. Nothing has been improved, and nothing
21 happened. So, the critical problem should not be
22 ignored any more longer because the injured worker
23 need to be treat. As what we heard that some
24 acupuncturist saying that the past two years always
25 they haven't treat any patient. So, you think about

1 that, we have the ten thousand acupuncture, license
2 acupuncture in all California, the whole California,
3 and every day they might be treating several injured
4 worker, but if all these people did not get the proper
5 treatments for what happened to them, they cannot go
6 back to work.

7 So, I address this, our concern is we really
8 oppose the decision made with ACOEM Guideline as a
9 permanent guideline, and we really wish the DWC
10 department that could do something after the hearing
11 today after listening so many people's concerns.

12 Thank you so much.

13 MS. BARRETT: Thank you very much. Kay Lam.

14 **KAY LAM**

15 MS. LAM: My name's Kay Lam. L-a-m last name.
16 First name K-a-y. I'm sorry. I'm not so much fluent
17 with English.

18 I am acupuncture doctor, also the supervisor over
19 the California U.S. Certified Acupuncture Association.
20 I'm here. We appreciate the opportunity to talk about
21 really something we have been waiting for so long time
22 in the acupuncture community. We have a group of
23 doctor working really hard since 1985 to legislate a
24 bill, SB899, for the injury worker could get
25 acupuncture treatment. Since 1998 and the law passed

1 give a the patient, injury workers, the right for
2 acupuncture treatment, give a the injury worker a
3 choice, a more choice of their treatment in
4 California. And since that, the law has been
5 extension for four or five times, and until 2002
6 Senator Porter's bill give for the permanent for the
7 injury worker to have the acupuncture treatment. So
8 the law, California law, give a the injury worker the
9 right for acupuncture treatment, and all but mostly
10 Legislature and the -- all the Council of California,
11 no question that is the law, but unfortunate since the
12 2004 the ACOEM Guideline, it's almost they take this
13 right away from this injury worker. The reason is
14 that firstly, the ACOEM Guideline make the acupuncture
15 really unclear. So, make the treating physician, they
16 thought from the ACOEM Guideline, so not going to pay
17 for acupuncture treatment. So, first the patients
18 feel difficult, more difficult to get that info from
19 their treating physician. Even think that before, but
20 as the Dr. Lau, as Dr. Lau mentioned about -- from my
21 office they almost could not have the assurancy to get
22 the authorization. For my practice almost 80 percent
23 of the patients wish the doctors a referral. I cannot
24 get authorization. So, the patient lost this
25 treatment. And just the last week I have for a

1 patient which she asked the doctor, treating
2 physician, for a referral, but they denied the
3 authorization. So, I say, oh, maybe you try to get a
4 attorney to helping you. So, she went to a attorney's
5 office, and the injury specialty attorney. The
6 attorney could not take her case. Why? They say from
7 the ACOEM Guideline the workers' compensation
8 insurance is not going to pay for acupuncture
9 treatment. So, it is really confusing right now. And
10 from my daily past experience we have been this
11 morning have a more doctors and then afternoon they
12 have more go back to their offices. We have about 50
13 percent the patient coming to our office is spinal
14 pain patient. I think from like a leg pain or back
15 pain, that kind of pain. Quite a lot of injury. That
16 kind of patient. From my -- since the 20 -- I start
17 practice in 1983 in California. So, longer than 20
18 years experience. For that kind of patient we have
19 about 80 percent of this patient could get the
20 treatment itself from the different level. Some
21 patient if we treat -- I have been treating this
22 injury patient. Some patient they fully recover.
23 They get back to work. Some, they take out their pain
24 medication addition because, if they taken it all, why
25 could they everyday like they got the pain medication.

1 Our treatment helping them prevent this kind of pain
2 medication addition to this patient. And some patient
3 from the different level we helping them to have a
4 better ability to handle their job duty, to handle
5 their daily living activity, the living condition.

6 So, I really like enjoy working with a this
7 patient but why not. I could say almost they just
8 like a doctor (unintelligible). Even the patient come
9 in we should get the doctor before. We did not get
10 this authorization. I am just saying two cases just
11 happen not long time ago. That's the one case. It's
12 a State Comp, State Compensation Insurance Fund, the
13 patient. Get the doctors in before, come to my office
14 with the pain in her leg. So, I write -- I did not
15 make any phone call because they never answer my phone
16 call, the insurance adjuster. So, I write a letter,
17 mail to them, fax it to them, so they have to answer
18 back. Few days later they call me. Oh, your case, I
19 forward you the medical consultation already. I say
20 okay, wait, I have been waiting for about two weeks
21 later, and I get the letter coming with the medical
22 consultant. They say according to the ACOEM Guideline
23 acupuncture is no efficacy of the result or for the
24 treatment.

25 In our daily practice 50 percent, more than 50

1 percent patient come in with the pain on their back,
2 and even the, many of the patient they have to pay for
3 this treatment but they still come here. Why?
4 Because the treatment helping them. The treatment is
5 now helping them, but the ACOEM Guideline saying not
6 helping for the spinal pain. And the insurance
7 company, all the California insurance company, deny
8 all the spinal pain patient authorization. And as a
9 medical science spinal pain is a really vague
10 diagnosis. Because the spinal pain has a world of
11 different research. Is it a soft tissue injury or
12 (unintelligible), a joint injury? Each patient's case
13 they will respond to the treatment or not. Each case
14 is an individual for medical science practice. Not --
15 all that I could say on this one thing. So, that's
16 one case. There's another case just happen in July.

17 MS. BARRETT: You have about two minutes.

18 MS. LAU: Okay. We have a pain patient comes in
19 who has seen a doctor before. That's a Hartford
20 Insurance Company. First the insurance adjuster Heide
21 throw the ball to the Kim. So, I write a first
22 letter. I write a second letter to Kim. And they
23 throw the ball to Pamela. So, that's an R.N. When I
24 call the nurse, she cannot have the patient's file.
25 Do not have what the doctor, the treating physician

1 medical evaluation report, that 12 page report saying
2 recommend a course of acupuncture treatment, page 9.
3 Do not have the file. They say okay. I don't have
4 the patient file. I say you got this referral too.
5 You don't have patient file. So I say okay. I fax
6 this report to you and I write a third letter too.
7 So, she give me the letter back. She said okay, you
8 write a examination and copy the report to
9 Dr. Choi. He cannot give you the authorization. I'll
10 say. That's why his number is so far away.

11 MS. BARRETT: You have about half a minute.

12 MS. LAU: Okay. Sorry. So, I talk a little fast
13 that's why. Dr._Choi, you not have the patient file.
14 So, by now the insurance company using the ACOEM
15 Guideline. The first people did not have the patient
16 file, did not see the patient, did not examination the
17 patient. They denied our authorization. So, they put
18 the -- use the ACOEM Guideline to take the patient's
19 right of treatment away. Wish you as a committee
20 should really do something to change this. To give
21 the right back to the injury worker of California.
22 Thank you very much.

23 MS. BARRETT: Thank you very much. If we can
24 refrain from clapping between each one, it would be
25 helpful.

1 Is Bill Kristy here?

2 **BILL KRISTY**

3 MR. KRISTY: Hi. My name is Bill Kristy.

4 MS. BARRETT: Would you mind spelling your name.

5 MR. KRISTY: K-r-i-s-t-y. And first I wanted to
6 say that I found that acupuncturist -- acupuncture did
7 more than just relieve pain. It greatly aided healing
8 for me. I am an injured worker, and I know many. I
9 am permanently disabled from computer programming with
10 a chronic, very slow healing repetitive strain injury.
11 Objective proof of our injuries can be impossible.
12 So, we don't get the treatment we need if treating
13 doctors we choose are ignored in favor of unfair
14 reforms like ACOEM. The workers' compensation system
15 was created to contain litigation by treating workers.
16 Before the reforms a couple of years ago California
17 workers' comp was already more unfair than almost any
18 other state. Now that we've lost rights to both
19 treatment and litigation, we're worse off than if
20 there were no workers' comp system at all.

21 MS. BARRETT: Thank you very much. Nancy Keiler.

22 MS. KEILER: Keiler.

23 MS. BARRETT: I'm sorry. Nancy Keiler.

24 **NANCY KEILER**

25 MS. KEILER: Hi. Good afternoon. I'm not an

1 injured worker. My name is Nancy Keiler, K-e-i-l-e-r.
2 And I'm with the California Coalition for Workers
3 Memorial Day, which is a pro-injured worker group.
4 Okay. I was not going to say anything until I got
5 here this morning. Our group has protested with Mr.
6 Zeltzer here in front of this very building half a
7 dozen times, okay, in the last few months. Today we
8 were greeted with the presence of the California
9 Highway Patrol. I think the word hijacked came out of
10 Carrie Nevan's mouth, went to Homeland Security, and
11 came down and was going to bust a bunch of injured
12 terrorists. I ask no reason for this. No reason
13 whatsoever. Okay. There was -- at one point there
14 was more troopers than protesters, and they're armed.
15 Our passion for just and appropriate medical treatment
16 for injured workers is our only weapon. I promise we
17 have no guns. Why were they there? Why were they
18 armed? What danger have we ever been to anyone? What
19 threat have we been? Who is paying these people? We
20 are paying them. And you know that they get time and
21 a half for protests, in San Francisco anyway, so I'm
22 sure -- I'm sure that the California State Highway
23 Patrol gets paid a whole lot of money. I'm addressing
24 the issue.

25 MS. BARRETT: Okay. Very good.

1 MS. KEILER: Thank you. And applause does make a
2 point. So, I don't want -- if you all want to
3 applaud, please do. I want my points well made.
4 Okay. I want to know what threat have we been. I
5 want to know who answers these questions. I am a
6 private citizen. I saw ten policemen with cars and
7 arms out there for crippled people. Most of our
8 people were in crutches. Okay. This place -- this
9 police presence only adds to the oppressive climate
10 and to the power of insurance companies and their need
11 to control public dissent. Again, who authorized
12 this? Who authorized -- I want to know as a public
13 citizen, who authorized that, the presence of those
14 police? And I want to know -- I want to know what at
15 the cost today for this police exercise was. You
16 know.

17 MS. BARRETT: Wait. Before you go any further,
18 do you have any --

19 MS. KEILER: And who are they protecting? Who
20 are they protecting? I want to know that. I want to
21 know the cost. Who are they protecting? Ms. Barrett,
22 this is part of this meeting.

23 MS. BARRETT: Actually the meeting is about these
24 proposed regulations.

25 MS. KEILER: Right.

1 MS. BARRETT: And you have this opportunity.

2 MS. KEILER: Right.

3 MS. BARRETT: You have ten minutes to discuss
4 them.

5 MS. KEILER: Exactly.

6 MS. BARRETT: Unfortunately you don't have the
7 right to not discuss them.

8 MS. KEILER: Okay.

9 MS. BARRETT: So, if you could stay on point it
10 would be very helpful.

11 MS. KEILER: Okay. Okay. Well, I just have one
12 more thing. Voltaire said, "It is dangerous to be
13 right when the government is wrong." Okay. And this
14 has been just a completely wrong situation today.
15 It's bogus. It's a fraud. You all sit there with no
16 compassion whatsoever. No compassion, and no
17 answering any questions. And please applaud.

18 MS. BARRETT: Okay. This name is Y-o-u-n-h
19 C-h-u-n-h. Is that Young Chung?

20 MS. CHUNG: Yes.

21 MS. BARRETT: Oh, very good.

22 **YOUNG CHUNG**

23 MS. CHUNG: Good afternoon. My name is Young
24 Chung, c-h-u-n-g. I'm a licensed acupuncturist in
25 California 12 years. I'm a member of the California

1 Acupuncture Association and the Korean Acupuncture
2 Association in California. Today I am here to --
3 since I've been practicing acupuncture the last 12
4 years and also treating worker injury last 11 years
5 and know what I see trend, what is going on here with
6 the workers' compensation case. I like to bring up
7 two cases here for my patients. One, she has been
8 with me since the 199 -- year 2001 referral by
9 orthopedic doctor, and this doctor_also referred by
10 her primary worker injury case doctor_and then second
11 this orthopedic doctor_referred for me for pain
12 management. With acupuncture and because she was a
13 highly allergic to any medication and the doctor
14 treated her best knowledge that acupuncture would be
15 best care for her to control the pain, and it worked.
16 However, this year and since this reform two years
17 ago, three years ago, she's back to her first work
18 injury care doctor, and this doctor, Dr. Foster, in
19 Castro Valley started sending her to me, and this law
20 said 24 visit per calendar year allowed. However,
21 this year utilization review said this -- her injury
22 care is not will help, won't help her case, which your
23 review board doctor was in Mississippi. So,
24 Dr._Foster wrote a letter to utilization review board,
25 and this patient has been under Dr._Chung's care the

1 last such and such a years has been control the pain
2 by acupuncture treatment.

3 Now, you are not orthopedic specialty. You're
4 simply family physician. Also I think don't have much
5 acupuncture knowledge in my opinion. Dr. Foster wrote
6 that. And also you have no right to make any
7 California law decision, workers' compensation. So,
8 therefore, should it be allowed this patient to
9 continue to have treatment, this acupuncture?
10 However, still denied. She cannot have this care any
11 more.

12 Another case. She has injured. She is an
13 Oakland Fire Department employee and has injured this
14 foot and developed neuroma, and she also came to me by
15 referral, her workers' doctor, workers' compensation
16 doctor, for the pain management. However, she also
17 not denied. She -- it usually took her get to me two
18 to three weeks.

19 MS. OVERPECK: Pause one minute please.

20 (At this point Ms. Overpeck changed tapes on the
21 recorder.)

22 MS. CHUNG: Give me some time to read.

23 MS. BARRETT: Wait.

24 MS. CHUNG: All right.

25 MS. OVERPECK: Okay.

1 MS. CHUNG: So, referral came in. However,
2 waiting period was eight weeks. It used to be two
3 weeks. And also her doctor wrote 12 visit and they
4 cut six visit. And at the six visit I wrote a report
5 to workers' compensation, also same time referring
6 physician. Referring physician requested it another
7 12 visit. And three months still not hear anything.
8 So, this conclusion is, review board they hired from
9 outside of California. I don't think it's such a good
10 idea for California injured care and the California
11 law. That's my conclusion. Thank you.

12 MS. BARRETT: Thank you very much.

13 MS. CHUNG: Thank you.

14 MS. BARRETT: Did William Zhao come back by any
15 chance? And Liu and Hutchings aren't here? And
16 Musawwir?

17 DR. SEARCY: So, I think that brings us to the end
18 of our list. Does anybody else -- would anybody else
19 like to speak? All right. Well, thank you all very
20 much for coming today. We will still accept written
21 comments until 5 o'clock today. So, you can still
22 send us comments. And if you have comments outside of
23 the -- these particular regulations, you can also send
24 those to us. We just want to remind you about the
25 Information and Assistance offices and that they're 24

1 different local offices and every month they give a
2 workshop for injured workers. The -- I've heard very
3 good things about it. We've actually sent our news
4 staff to them and they're getting very good reviews
5 from injured workers that have called us. The list of
6 those offices is over on the table, and they do have
7 monthly workshops for injured workers. So, thank you,
8 and it's free. Thank you very much for coming today.
